SCIENCE is published weekly, except the last week in December, but with an extra issue on the third Tuesday in September, by the American Association for the Advancement of Science, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Now combined with *The Scientific Monthly*. Second-class postage paid at Washington, D.C., and additional entry. Copyright © 1978 by the American Association for the Advancement of Science. Member rates on request. Annual subscriptions \$65; foreign postage: Canada \$10; other surface \$13; air-surface via Amsterdam \$30. Single copies \$5; \$2 by mail (back issues \$3) except *Guide to Scientific Instruments* \$6. School year subscriptions: 9 months \$50; 10 months \$55. Provide 6 weeks' notice for change of address, giving new and old addresses and postal codes. Send a recent address label, including your 7-digit account number. Postmaster: Send Form 3579 to *Science*, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005. *Science* is indexed in the Reader's Guide to Periodical Literature and in several specialized indexes.

American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are the promotion of science, the furtherance of the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to increase public understanding and appreciation of the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Sections of pancreas from five mice (arranged vertically) stained with fluorescein-labeled antibody to reovirus and rhodamine-labeled antibody to insulin. When viewed with fluorescein filters, cells containing viral antigens appeared green (left column). When the same sections were viewed with rhodamine filters, insulin-containing β cells in the islets of Langerhans appeared orange (middle column). Double-exposure photography (right column) shows viral antigens in β cells. Transition from top to bottom reveals a progressive increase in the number of β cells infected with reovirus. See page 529. ST. Ono-
