COVER

This well-preserved and complete hominid upper jaw exhibits some of the primitive morphology diagnostic of the newly described species, Australopithecus afarensis, Johanson, White and Coppens, 1978. The specimen (A.L. 200-1a) is from the site of Hadar in Ethiopia and is dated to about 3.2 million years. The right canine is fossilized partially out of its socket. See page 321. (Drawing by Luba Dmytryk, Laboratory of Physical Anthropology, Cleveland Museum of Natural History)
Science 203 (4378), 314-378.
