American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to promote the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.			

False-color image of Venus at 2068 angstroms. Image was obtained by the University of Colorado's ultraviolet spectrometer experiment on the Pioneer Venus orbiter, 4 January 1979 (orbit 31). Yellow represents the brightest regions, blue the darkest. Venus's spin axis is tilted 30° toward the observer, with the north pole on the terminator at the top center. The markings are due to variations in the structure of Venus's cloud tops and in the distribution of sulfur dioxide in the atmosphere. See page 777.
