Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to promote the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to increase the effectiveness of science in the promotion of human welfare, and to increase public understanding and to emphasize the importance and promise of the methods of science in human progress.

COVER

Yanomamö archer near the headwaters of the Orinoco River, Venezuelan-Brazilian border. Intervillage warfare among the Yanomamö accounts for as much as 25 percent of adult male deaths in some regions of the tribe, yet the pattern and intensity of their warfare do not appear to be associated with shortages of strategic resources such as high-quality protein from game animals or cultivable land. See page 910. [Napoleon A. Chagnon, Pennsylvania State University, University Park]
