COVER

Yañomamó archer near the headwaters of the Orinoco River, Venezuelan-Brazilian border. Intervillage warfare among the Yañomamó accounts for as much as 25 percent of adult male deaths in some regions of the tribe, yet the pattern and intensity of their warfare do not appear to be associated with shortages of strategic resources such as high-quality protein from game animals or cultivable land. See page 910. [Napoleon A. Chagnon, Pennsylvania State University, University Park]
