In Your Lab.

We originated PYREX® brand glassware in our lab over sixty years ago. We're busy keeping PYREX® labware original for you today. Innovating. Adjusting. Testing. We do more with glass at Corning than anyone else in the business. To keep you more at home in your lab.

NEW. The Corning Stopper. All-hollow glass design, strong and light. Barrel-shaped head with wide side grooves, to clamp your fingers on. Easy twisting, out or in. The Corning Stopper will stand on its head to keep your hands free.

Well-Sealed Head to Toe. We plug above with our new Corning Stopper to keep the inside of the funnel clean. The stopper is lightweight, easy to handle. Tight, quick to seal.

Our new automatic zeroing buret is dual controlled. One SLAMMER controls filling, the other controls dispensing.

FREE

Try our new stopper. Feel how comfortable it is to use. We're interested in your comments.

Happy Endings.

Your DNA research should have a happy ending. That's why Miles has developed enzymes that cleave and splice DNA easily and accurately.

All of our restriction nucleases—such as Eco RI—specifically cleave DNA within certain well-defined base sequences. And to make sure you're happy with the cleaved ends, we include a sample of lambda DNA for verification of enzyme activity ... so you never risk your research DNA. The results of our stringent specification tests are reported on the chemical credential that accompanies each order. No surprises, no mystery.

And, for recombinant DNA, we have terminal transferase to add dA and dT segments and DNA ligase to splice fragments together. Restriction nucleases, terminal transferase, DNA ligase. Miles enzymes for happy endings ... and beginnings.

Miles enzymes for the cleaving and splicing of DNA.
Pick a partner for life

Pick a Zeiss Standard

Zeiss Standard Microscopes are precision engineered to last a lifetime—and be always up to date. Standards made more than 25 years ago accept all of today’s new accessories, objectives, stages, and light sources. Try this with any other brand of microscope, and you’ll appreciate Zeiss quality and durability.

Many to pick from

No matter what your field… INDUSTRIAL RESEARCH, PRODUCTION, QUALITY CONTROL; ELECTRONICS; GEOLOGY; PATHOLOGY; BIOMEDICINE …you’ll find a low-priced Zeiss Standard to fit your exact need and give you years of trouble-free, worry-free quality. You’ll work happily ever after.

Nationwide service.

The great name in optics

A basic question concerning applied research:

Will your next research project establish the basis for developing an innovative product with significant commercial appeal?

If your answer is an unqualified yes, you may be eligible for a

TECHNICON RESEARCH GRANT

The Technicon Science Center in Tarrytown, New York, where Technicon Instruments Corporation, international leader in automated clinical analysis, conducts extensive research and development programs.

THIS CAN MEAN:
- Research support of up to $100,000 per year.
- Royalty payments on patents if Technicon is able to develop a marketable product following completion of the research.

CATEGORIES
Following are examples of acceptable topics:
- Automated measurement of physiologic constituents, or medical diagnostic instruments generally.
- Non-invasive diagnosis of internal organs or measurement of physiologic functions.
- Detection of dental pathology.
- Veterinary diagnostic instruments.
- Instruments for industrial, agricultural or environmental measurement.

WHO IS ELIGIBLE
Grants are available to scientists at colleges, universities, medical centers and non-profit research institutes in North American, Western European and Mediterranean countries.

HOW TO PROCEED
Do not send a proposal at this time. Write to one of the following addresses for further information and a "Preliminary Submission Form." Deadline for full proposals is December 14, 1979.

In North America, write:
Technicon Research Grants Program
c/o Morris H. Shamos, Ph.D.
Technicon Instruments Corporation
Tarrytown, New York 10591

In Western Europe and the Mediterranean area, write:
Technicon Research Grants Program
c/o Harry W. Holy, Ph.D.
Technicon International Division S.A.
12-14 Chemin Rieu, 1208
Geneva, Switzerland

Did you miss the AAAS Annual Meeting in 1976, 1977, 1978 or 1979?

You can make up for lost opportunities by listening to the sessions on high-quality cassette tapes.

You can share the information of AAAS meetings with others or review it yourself.

Write to Eastern Audio and ask for a complete list of AAAS tapes and prices.

Create a miracle!
Neotec Model 6350 Research Analyzer grades any product
even ones you thought were impossible
- Automatically scans and self-determines correct wavelengths and data handling for best results... in less than 12 seconds
- Analyzes quantitatively chemical-by-chemical
- Rates even intangible quality factors

Reliable Shakers

When it comes to reliable performance, you can count on Burrell Wrist-Action® Shakers. They're ruggedly built for long life . . . some units have been in operation over forty years. Burrell Shakers duplicate a hand-mixing swirl with an even motion at all speeds for as long as necessary. And Burrell's unique Build-Up® System lets your Shaker grow as your lab grows . . . from a Shaker that holds 1 to 4 flasks to a Shaker that holds 24. Burrell parts and accessories are interchangeable. Burrell Wrist-Action Shakers with Build-Up design . . . the Reliable Shaker.
