

# SCIENCE

A WEEKLY JOURNAL DEVOTED TO THE ADVANCEMENT OF SCIENCE, PUBLISHING THE  
OFFICIAL NOTICES AND PROCEEDINGS OF THE AMERICAN ASSOCIATION  
FOR THE ADVANCEMENT OF SCIENCE.

FRIDAY, APRIL 7, 1905.

## CONTENTS:

<i>The Mutation Theory of Organic Evolution:—</i>	
<i>From the Standpoint of Animal Breeding:</i> PROFESSOR W. E. CASTLE.....	521
<i>From the Standpoint of Cytology:</i> PRO- FESSOR EDWIN G. CONKLIN.....	525
<i>Mutations:</i> PROFESSOR THOMAS DWIGHT..	529
<i>Systematic Work and Evolution:</i> PROFESSOR L. H. BAILEY.....	532
<i>Ethology and the Mutation Theory:</i> PRO- FESSOR WILLIAM MORTON WHEELER.....	535
<i>Discontinuous Variation and the Origin of Species:</i> DR. D. T. MACDOUGAL.....	540
<i>Scientific Books:—</i>	
<i>The Zoological Record:</i> PROFESSOR T. D. A. COCKERELL. <i>Dantec's Les lois naturelles:</i> DR. W. H. SHELDON.....	543
<i>Societies and Academies:—</i>	
<i>The New York Section of the American Chemical Society:</i> DR. F. H. POUGH.....	547
<i>Discussion and Correspondence:—</i>	
<i>The Naturalist's Universal Directory:</i> G. K. GILBERT. <i>An Overlooked Form of Stereo- scope:</i> PROFESSOR FRANK P. WHITMAN. <i>Kilauea again Active:</i> PROFESSOR C. H. HITCHCOCK .....	548
<i>Special Articles:—</i>	
<i>The Prairie Mounds of Louisiana:</i> PRO- FESSOR E. W. HILGARD. <i>Progress in the Study of the Kelep:</i> O. F. COOK.....	551
<i>Quotations:—</i>	
<i>The Sanitation of the Panama Canal Zone..</i>	554
<i>Botanical Notes:—</i>	
<i>A Helpful Bulletin; Seashore Laboratories; Utah Fungi; Photographs of Vegetation:</i> PROFESSOR CHARLES E. BESSEY.....	555
<i>Scientific Notes and News.....</i>	556
<i>University and Educational News.....</i>	559

## THE MUTATION THEORY OF ORGANIC EVOLUTION.\*

*The Mutation Theory of Organic Evolu-  
tion, from the Standpoint of Animal  
Breeding:* W. E. CASTLE, Assistant Pro-  
fessor of Zoology, Harvard University.

The mutation theory, as I understand it, is not designed to replace Darwin's theory of natural selection, nor is it capable of replacing that theory. Natural selection must still be invoked to choose between different organic forms, preserving the more efficient, destroying the less efficient. The question raised by this new theory is, What sort of forms are subjected to the action of natural selection? Is there a complete gradation of forms between two extreme conditions and is natural selection called upon to choose from this whole series the one which is organically most efficient, or is the task simpler and is the choice made merely between two widely separated conditions of the ideal series? Thus, we find within a species two varieties, one larger than the other. Have they diverged by gradual cumulation of minute differences in size, or by a single step? These alternative views are known, respectively, as the selection theory and the mutation theory. Both views were recognized by Darwin as possibilities, though he seems to have attached more importance to the process of gradual modification. Most of his followers have given attention exclusively to this process, but a few, like Bateson and de Vries, have regarded modification by

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

\* Six addresses given before the American Society of Naturalists at Philadelphia, December 28, 1905.
