LETTERS  Asteroid Extinction Hypothesis: D. V. Kent; G. C. Reid; R. E. Brown; L. W. Alvarez et al. ................................. 648

EDITORIAL  Usefulness of the Social Sciences: K. Prewitt .................................................. 659

NEWS AND COMMENT  William Perry and the Weapons Gamble .................................................. 681 - Energy, Security, and War .................................................. 683 - Hatch Takes Over Senate Labor Committee .................................................. 684 - Is R & D the Key to the Productivity Problem? .................................................. 685 - Space Telescope Institute at Hopkins .................................................. 688 - Briefing: Governor Brown Boosts Microelectronics; Geological Survey Chief Lost in Transition; Youth and Loyalty at OMB .................................................. 688

RESEARCH NEWS  Jumping Genes Help Trace Inherited Diseases .................................................. 690 - There Is More to “Acid Rain” Than Rain. .................................................. 692 - New Study Links Chlorination and Cancer .................................................. 694

BOOK REVIEWS  Birth and Fortune, reviewed by R. L. Clark; Pollution, Politics, and International Law, D. S. Cheever; Nocturnal Malagasy Primates, R. J. Russell; Aquatic Oligochaete Biology, K. Fauchois; Receptors for Neurotransmitters, Hormones and Pheromones in Insects, R. J. Greenspan; Books Received .................................................. 695
Observations of Solar Irradiance Variability: R. C. Willson et al. ........................................ 700
On the Sources of Summertime Haze in the Eastern United States: G. T. Wolff; N. A. Kelly, M. A. Ferman .................................................. 703
Hormesis: A Response to Low Environmental Concentrations of Petroleum Hydrocarbons: R. B. Laughlin, Jr., J. Ng, H. E. Guard ........................................ 705
Methane Production from Acetate and Associated Methane Fluxes from Anoxic Coastal Sediments: F. J. Sansome and C. S. Martens ............................... 707
Membrane Conductance and Action Potential of a Regenerating Axonal Tip: H. Meiri, M. E. Spira, I. Parnas .................................................. 709
Gap Junctional Conductance Is a Simple and Sensitive Function of Intracellular pH: D. C. Spray, A. L. Harris, M. V. L. Bennett ........................................ 712
Concentration Oscillations and Efficiency: Glycolysis: P. H. Richter and J. Ross .................................................. 715
Free and Forced Diving in Birds: J. W. Kanwisher, G. Gabrielsen, N. Kanwisher .................................................. 717
Exposure of Newborn Rats to Pharmacologically Active Compounds May Permanently Alter Carcinogen Metabolism: R. A. Faris and T. C. Campbell .................................................. 719
Sex Ratio Manipulation and Selection for Attractiveness: N. Burley .................................................. 721
Neural Correlates of a Nonjammmable Electrolocation System: J. A. Matsubara .................................................. 722
Interaction Between Purine and Benzodiazepine: Inosine Reverses Diazepam-Induced Stimulation of Mouse Exploratory Behavior: J. N. Crawley et al. .... 728
Tyrosine Administration Decreases Vulnerability to Ventricular Fibrillation in the Normal Canine Heart: N. A. Scott et al. .................................................. 727
Cigarette Smoking in the 1970's: The Impact of the Antismoking Campaign on Consumption: K. E. Warner .................................................. 729

Data Plotter; Nanoliter Pump; Interactive Graphics; Spectrofluorometer; Liquid Chromatograph; Electrophoresis; Motion Analyzer; Echocardiograph; DNA Synthesizer; Protein Analyzer; Electrophoresis Cell; Freezer; Data Acquisition System; Ultraviolet-Visible Spectrophotometer; Literature. .................................................. 736

View down the axis of double helical DNA photographed directly from realtime, interactive three-dimensional color display. Up to four large molecules may be displayed in color as skeletal models and/or surfaces and their stereorechemical interactions studied in three dimensions. See page 661. [Robert Langridge, Computer Graphics Laboratory, University of California, San Francisco]
