American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to promote the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to promote the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

The oceanographer François Péron. Péron joined the 1800–1804 French expedition to Australian waters, led by Nicolás Baudin, as a zoologist. On this expedition more than 100,000 specimens of animals were collected. Péron also made systematic measurements of the temperature of the sea. [From Péron's account of the expedition, *Voyage de Découvertes aux Terres Australes*; reproduced in I. S. F. Jones and J. E. Jones, "Early 19th century oceanography around Terra Australis," in *Oceanography: The Past*, reviewed on page 792]
