The oceanographer François Péron. Péron joined the 1800–1804 French expedition to Australian waters, led by Nicolás Baudin, as a zoologist. On this expedition more than 100,000 specimens of animals were collected. Péron also made systematic measurements of the temperature of the sea. [From Péron's account of the expedition, Voyage de Découvertes aux Terres Australes; reproduced in I. S. F. Jones and J. E. Jones, 'Early 19th century oceanography around Terra Australis,' in Oceanography: The Past, reviewed on page 792]
