COVER
Computer-pseudocolor-enhanced vid-
eo images of red blood cells following
placement of a 2-micrometer laser le-
son (dark spots in black-and-white photo). Different color
enhancements bring out specific detail not detectable
by conventional microscopy. Note small white spot (0.4 micrometer) in
red enhancements; this is a hot spot in center of laser lesion not detectable in
black-and-white photo. See page 565. [Michael W. Berns, Department of De-
