**REPORTS**

Transient Climate Response to Increasing Atmospheric Carbon Dioxide: *K. Bryan* et al. ........................................................ 56
Copernicus Crater Central Peak: Lunar Mountain of Unique Composition: *C. M. Pieters* .......................................................... 59
Phagocytosis: Flow Cytometric Quantitation with Fluorescent Microspheres: *J. A. Steinkamp* et al. ................................. 64
Serum from Monkeys with Histories of Fetal Wastage Causes Abnormalities in Cultured Rat Embryos: *N. W. Klein* et al. .......... 66
Reversal of Induced Ischemic Neurologic Deficit in Gerbils by the Opiate Antagonist Naloxone: *Y. Hosobuchi, D. S. Baskin, S. K. Woo* 69
Epinephrine Reduction of Heme: Implication for Understanding the Transmission of an Agonist Stimulus: *D. A. Peterson* et al. ........................................................................ 71
Preferential Attack of Mitochondrial DNA by aflatoxin B1 During Hepatocarcinogenesis: *B. G. Niranjan, N. K. Bhat, N. G. Avadhani* 73
Substance P Counteracts Neurotoxin Damage on Norepinephrine Neurons in Rat Brain During Ontogeny: *G. Jonsson and H. Hallman* 75
Pulmonary Blood Plasma Filtration in Reptiles: A “Wet” Vertebrate Lung?: *W. W. Burggren* .......................................................... 77
Coupling of Histone and DNA Synthesis in the Somatic Cell Cycle: *A. M. Delegeane and A. S. Lee* ............................................. 79
β,γ-Peroxy Analogs of Adenosine and Guanosine Triphosphate: Synthesis and Biological Activity: *M. S. Rosendahl and N. J. Leonard* 81
Spray Aiming in Bombardier Beetles: Jet Deflection by the Coanda Effect: *T. Eisner and D. J. Aneshansley* ..................................... 83
Play Behavior: Persistence, Decrease, and Energetic Compensation During Food Shortage in Deer Fawns: *D. Muller-Schwarze, B. Stagge, C. Muller-Schwarze* 85
Detection of Mutagens in Complex Samples by the *Salmonella* Assay Applied Directly on Thin-Layer Chromatography Plates: *A. Bjørseth* et al. .............................................................. 87

**COVER**

Male fawn of the white-tailed deer (*Odocoileus virginianus*), 5 weeks old. Fawns of that age derive most of their energy from milk and the remainder from vegetation. They run about 450 meters in a play bout. When deprived of part of their milk, they continue to play, rest more, and compensate by increased grazing. See page 85. [Richard Altieri, P.O. Box 399, Tully, New York 13159]
Science 215 (4528), 6-89.
