COVER

Montage of Voyager photographs constructs a view over the limb of Enceladus (foreground, Voyager 2) which looks back toward the sun to observe Rhea (lower right, Voyager 1), Saturn (Voyager 1), Mimas (near Saturn, Voyager 2), and Titan (upper right, Voyager 2). Voyager 2 is currently proceeding toward flybys of Uranus (January 1986) and Neptune (August 1989). See page 499. [Montage prepared by R. W. Post, Photolab, Jet Propulsion Laboratory, Pasadena, California 91103]
