Corticosterone: A Critical Factor in an Opioid Form of Stress-Induced Analgesia: A. J. MacLennan et al.

Widespread Periodic Intrinsic Connections in the Tree Shrew Visual Cortex: K. S. Rockland and J. S. Lund

Behaviorally Conditioned Immunosuppression and Murine Systemic Lupus Erythematosus: R. Ader and N. Cohen

Endogenous Opiates and Energy Balance: A. Mandenoff et al.

Chromatic Valence Curves: Alternative Interpretation Derived by the Direct Matching Method: M. Ayama and M. Ikeda

Phase contrast photomicrograph of dorsal horn thalamic projection neuron surrounded by immunocytochemically labeled enkephalinergic axonal endings. The granular, retrogradely transported horseradish peroxidase is dispersed in the cell's cytoplasm. The presence of enkephalinergic synapses on thalamic projection neurons suggests that opiate modulation of the behavioral response to noxious stimulation occurs directly on the projection neurons (1-micrometer plastic section, counterstained with toluidine blue; about x3700). See page 1523. [M. A. Ruda, National Institutes of Health, Bethesda, Maryland 20892]
