American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

Bowerbird (Amblyornis flavifrons) recently rediscovered in a remote part of New Guinea. To attract females, males build a stick tower on a rimmed moss platform, decorate it with fruit of three different colors, and extend toward the female a blue fruit set against the golden crest. See page 431. [Painting by William Cooper, The Birds of Paradise and Bower Birds, William T. Cooper and Joseph M. Forshaw.
