Cover

Flying at 50 meters per second, low-flying aircraft are equipped with recently  
developed analytical sensors which make possible an accurate and rapid  
estimate of crop growth, health, and ultimate yield over large areas. Calcula-  
tions are based on the measurement of carbon dioxide and vertical wind  
speed at 10 to 30 meters above the growing crop. See page 733. [Research  
Program Service, Research Branch, Agriculture Canada, Ottawa, Ontario,
