Activity-Dependent K+ Accumulation in the Developing Rat Optic Nerve: B. W. Connors et al. .......................................................... 1341

COVER

The Very Large Array (VLA) of 27 radio telescopes, seen here in its smallest (1 kilometer) configuration on a high plain in New Mexico, is an instrument used by U.S. astronomers to make radio pictures of the sky with the resolution of optical telescopes. See page 1279. [Photograph provided by the National Radio Astronomy Observatory, operated by Associated Universities, Inc., under contract with the National Science Foundation]
