REPORTS

Compositional Structure of the Asteroid Belt: J. Gradie and E. Tedesco

Low-Frequency Eddy Kinetic Energy Spectrum in the Deep Western North Pacific: S. Imawaki and K. Takano

Homeothermic Response to Reduced Ambient Temperature in a Scarab Beetle: K. R. Morgan and G. A. Bartholomew

Indoor Airborne Asbestos Pollution: From the Ceiling and the Floor: P. Sebastien, J. Bignon, M. Martin

York River Destratification: An Estuary-Subestuary Interaction: D. Hayward, C. S. Welch, L. W. Haas

Spatial Trends in the Lead Concentrations of Umbilical Cord Blood: M. B. Rabinowitz and H. L. Needleman

Schizophrenia: Dopamine β-Hydroxylase Activity and Treatment Response: D. E. Sternberg et al.

Reduced Leucine-Enkephalin-Like Immunoreactive Substance in Hamster Basal Ganglia After Long-Term Ethanol Exposure: K. Blum et al.

Central Regulation of Intestinal Motility by Somatostatin and Cholecystokinin Octapeptide: L. Bueno and J.-P. Ferre

Sexual Dimorphism in the Human Corpus Callosum: C. de Lacoste-Utamsing and R. L. Holloway

COVER

General view of the excavation in 1970 into the east-west profile left by D. A. E. Garrod in the Tabun Cave on Mount Carmel. This 10-meter section yielded evidence of about 75,000 years of human development early in the last interglacial-glacial cycle. Removal of material in alternate 1-meter squares allowed close control of the complex natural stratigraphy. See page 1369. [A. J. Jelinek, Department of Anthropology, University of Arizona, Tucson 85721]
