American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to increase the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Simulated vase, assembled from scale molecular model, inspired a two-step synthesis of the compound it represents. The enforced concave interior of the compound makes it a cavitand (a molecular container) capable of hosting guests of moderate molecular dimensions. See page 1177. [Donald J. Cram, Department of Chemistry, University of California, Los Angeles 90024]
