Friday, December 22, 1905.

CONTENTS.
The New Orleans Meeting ......................... 809
Anthropology at the Louisiana Purchase Ex-
position: DR. W. J. Mcgee ...................... 811
The American Ornithologists' Union: JOHN
H. SAGE ...................................... 827
Scientific Books:—
Some Recent Texts in General and Organic
Chemistry: PROFESSOR WILLIAM MCPHER-
SON ........................................ 828
Scientific Journals and Articles. ................. 831
Societies and Academies:—
The Convention Week Meetings of Sci-
cific Societies. The Biological Society of
Washington: E. L. Morris. The Philo-
osophical Society of Washington: CHARLES K.
WEBB. The Section of Anthropology and
Psychology of the New York Academy of
Sciences: PROFESSOR R. S. WOODWORTH ... 832
Discussion and Correspondence:—
The Theory of Isolation as applied to
Plants: LEROY ABRAMS. Ground Rock for
Fertilizing Purposes: ALLERTON S. CUSHMAN 836
Special Articles:—
Ziegler's Theory of Sex Determination and
an Alternative Point of View: PROFESSOR
T. H. MORGAN. The Sargasso Fish not a
Nest-maker: DR. THEO. GILL, E. W. GUDGER.
Sex Differences in the Estimation of Time:
DR. ROBERT M. YERKES, F. M. URBAN. Pre-
liminary Announcement concerning a New
Mercury Mineral from Terlingua, Texas:
W. F. Hillebrand ......................... 839
Quotations:—
University Administration ..................... 814
A New School for Clay Workers ................ 815
Physiology and Experimental Medicine at the
New Orleans Meeting ........................ 846
Scientific Notes and News .................... 846
University and Educational News ............. 848

MSS. intended for publication and books, etc., intended
for review should be sent to the Editor of Science, GARRI-
son-on-Hudson, N. Y.

THE NEW ORLEANS MEETING.
The meeting of the American Association for the Advancement of Science at New Orleans is a further step towards making the association truly national and representative of the men of science of the whole country. There has been a natural tendency for the association and its affiliated societies to meet near the center of scientific population, and it is of course under these conditions that the largest number of members can be brought together. But our scientific workers are by no means confined to the eastern and central states. When the association in 1901 met for the first time west of the banks of the Mississippi it was a natural acknowledgment of the westward extension of scientific institutions. The meeting at Denver was decided on with some hesitation, but it proved to be one of the most interesting in the history of the association. Not since 1850 has the association met further south than Nashville and St. Louis. But the south is now making marvelous progress in its material resources, and its educational and scientific development will soon be in equal measure. Tulane, Texas and other universities already occupy a foremost position, and their growth as centers of scientific research is certain.
A meeting of the association at New Orleans is a proper acknowledgment of
Science 22 (573), 809-848.
