COVER
A crow that becomes taste-averted by eating the green-painted toxic egg in this straw nest in North Dakota will avoid other green eggs whether or not they contain toxin. The monarch butterfly caterpillar (Danaus sp.) shown here accumulating cardiac glycoside while feeding on milkweed (Ascepias sp.) may, with its visual mimics, be relying on the same mechanisms to protect it from visual predators. See page 212. [L. K. Nicolaus, Butte Falls, Oregon 97522]
