Clustered Third-Base Substitutions Among Wild Strains of Escherichia coli: R. Milkman and I. P. Crawford .......................... 378

Forms of Memory Failure: H. Weingartner et al. ........................................... 380

Spectral Consequences of Photoreceptor Sampling in the Rhesus Retina: J. I. Yellott, Jr. .................................................. 382

Consequences of Spatial Sampling by a Human Photoreceptor Mosaic: D. R. Williams and R. Collier ..................................... 385

Macroevolutionary Trends: New Perspectives on the Roles of Adaptation and Incidental Effect: E. S. Vrba ................................ 387

Interactions Among Converging Sensory Inputs in the Superior Colliculus: M. A. Meredith and B. E. Stein .......................... 389

COVER

Top view of the giant hemoglobin of an earthworm (Lumbricus terrestris). Thirty-six separate molecules were summed in the top view. The diameter is 300 angstroms. The color conversion scale is roughly that of an atlas. The intensity scale black-white is converted into 256 identifiable colors blue-green-yellow-brown-orange-red-purple-white. See page 325. [M. Ohtsuki, Enrico Fermi Institute, University of Chicago, Illinois 60637]
Science 221 (4608), 318-391.
