SCIENCE is published weekly on Friday, except the last week in December, by the American Association for the Advancement of Science, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005. Second-class postage (publication No. 406460) paid at Washington, D.C., and at an additional entry. Now combined with The Scientific Monthly. Copyright © 1983 by the American Association for the Advancement of Science. Domestic individual membership and subscription ($1 issues): $53 (Domestic); institutional subscription ($11 issues): $95. Foreign postage extra: Canada $44, other countries $72. Airsurface via Amsterdam $72. First class, airmail, school-year, and student rates on request. Single copies $2.50 ($3 by mail); back issues $3 ($3.50 by mail). 1985-1990, the Copyright Act of 1976, grants libraries permission to photocopy for internal and personal use up to 200 copies per year, provided the base fee of $1 per copy plus $0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The Identification code for Science is 0036-8075/83 $1.00 - 10.

Postmaster: Send Form 3579 to Science, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005.

COVER
Mouse on the right is more than twice the size of its control sibling because it contains a foreign gene composed of the mouse metallothionein promoter fused to the human growth hormone structural gene. To our knowledge, this is the first example of a human gene expressed in another animal. The metallothionein promoter (yellow) extends in the first exon. Gene exons (cross-hatched areas) represent the part of the gene that becomes the message for human growth hormone. The human growth hormone gene is red. A piece of the pBR322 plasmid is shown in beige. See page 809. [R. L. Brinster and R. E. Hammer, School of Veterinary Medicine, University of Pennsylvania, Philadelphia 19104]
