The data proves it. And, you can achieve enhanced microsequencing and autoconversion with our latest System 890M sequencer or with your Model 890C and a performance upgrade kit.

Cytochrome C—200 Picomole Performance

From a loaded sample of 200 picomoles, a 94% average repetitive yield was achieved with an intercept sensitivity of 178 picomoles.

In-Line Autoconversion

With Beckman sequencers, conversion takes place in individual tubes in the fraction collector, not in an intermediate or common vessel. There is no extraction, no additional solvent and no loss of PTH amino acids. And, particularly important, there is virtually no chance of cross-contamination. HPLC traces show the quality of the resulting derivatives.

β-Endorphin—The Complete Sequence

Sequencing a peptide is a good measure of performance. Using β-endorphin, an average repetitive yield of 95% was attained. All 31 residues were clearly identified.

Value and Economy

If you own an earlier Model 890C, you can get enhanced microsequencing and autoconversion for less than one-third the cost of a new sequencer! If it's a new instrument you need, System 890M comes equipped with all the up-to-date microsequencing, autoconversion and software features.

Either way, you can sequence peptides and proteins economically with reduced chemical consumption and lower operating costs. There's even System 890M+, the Sequencer plus a matched HPLC detection system priced just a little more than what some ask for a sequencer alone.

The Proof is In the Data

Detailed applications and product data are available now from your local Beckman Representative, or by writing us: Beckman Instruments, Spinco Division, 1050 Page Mill Road, Palo Alto, California 94304 U.S.A.

Controversies, prodigies, scholarship, discoveries: New science books from Columbia.

JUST BEFORE THE ORIGIN
Alfred Russel Wallace's Theory of Evolution
John Langdon Brooks. A fascinating account of the British naturalist who formulated a theory of evolution through natural selection BEFORE The Origin of Species, exerting a clear, but unacknowledged, influence on Darwin. 284 pp., $30.00

THE GREAT MENTAL CALCULATORS
The Psychology, Methods, and Lives of Calculating Prodigies, Past and Present

THE PHENOMENON OF MAN REVISITED
A Biological Viewpoint on Teilhard de Chardin
Edward O. Dodson. "A very valuable piece for those interested in the work of Teilhard de Chardin in particular and in the constructive relationships of science and religion in general."—Karl E. Peters. 288 pp., $25.00

ADAPTATIONS FOR FORAGING IN NON-HUMAN PRIMATES
Contributions to an Organismal Biology of Prosimians, Monkeys, and Apes
Peter S. Rodman and John G.H. Cant, Editors. Eight active scientists explore the pervasive influence of the search for food on structure and behavior. 351 pp., $35.00 cloth. A King's Crown Paperback, $18.50

CLADISTICS
Perspectives on the Reconstruction of Evolutionary History
Edited by Thomas Duncan and Tod F. Stuessy. The first and only volume to present an overall picture of the controversial nature of cladistics and the disagreements about definitions, concepts, and methods among the leading thinkers of the field. 368 pp., $35.00

FUNGUS-INSECT RELATIONSHIPS
Perspectives in Ecology and Evolution
Edited by Quentin Wheeler and Meredith Blackwell. "This comprehensive collection of essays on...the two largest and most diverse groups of living organisms represents a significant advance in the fields of community ecology and co-evolution." — John F. Lawrence. 512 pp., $60.00

FRAME OF THE UNIVERSE

DICTIONARY OF THE ENVIRONMENT
Second Edition
Michael Allaby. With all entries revised and expanded—and 255 new entries added—this major reference, first published in 1977, remains "useful, up-to-date...fills an obvious need."—Biologist. Illus. 529 pp., $50.00 NEW YORK UNIVERSITY PRESS Distributed worldwide by Columbia University Press

NOW IN PAPERBACK
THE MYTHS OF HUMAN EVOLUTION
Niles Eldredge and Ian Tattersall. "A superb summary of the hominid fossil evidence to date... cogently argued and clearly written."—Discover. "It will undoubtedly keep things bubbling for some considerable time to come."—Times Literary Supplement. 197 pp., $10.95 paperback

18 MAY 1984
BIG PICKIN'S FROM THE ORANGE GROVE

CELL WELLS™ MULTIPLE WELL PLATES
Choose the slice that's just right for your work. 24, 96, or 96 half well design. Flat or round bottom. Sterile. Tissue culture treated or non-treated. With or without lid. Individual or bulk pack.
One-way lid with a ring for each well and raised wells on the plate help prevent cross contamination. Uniform walls. Optically clear. Undistorted microscopic viewing. Rank and file markings.

TISSUE CULTURE FLASKS
Pick 25, 75, or 150 cm² capacity. Straight or canted neck. Wide neck for easy access. Orange plug cap seals in the neck. Black phenolic cap seals at the rim. It's really an orange at heart.) Optically clear polystyrene. Graduations for simple filling. Large marking spot for easier labeling.

NEW PICKIN'S

BIONIQUE CHAMBER/DISH
Culture cells for better light or electron microscopy, from bacteria to TC monolayers. Unique Corning vessel is reusable and autoclavable. Choose glass or clear Teflon® substrates for versatility and EM work. Removable cover gives you direct access to substrate.

FILTER/STORAGE SYSTEM
Filter media and fluids in a single system. Minimize handling and contamination. Cellulose acetate membranes for low protein binding. Integral support increases flow, cuts foaming. Easy access receiver bottle unscrews to pour or pipet easily. Ideal for storage, too. 200 or 500 mL sizes. (500 mL size comes with free stand.)
THE RETINOIDs
Volumes 1 and 2
Edited by MICHAEL B. SPOrn,
ANITA B. ROBERTS, and DrWITT S. GOODMAN
Volume 1 deals with new advances in organic and
trace chemistry, followed by surveys of chemical
and biological methods for analysis and assay of
retinoids.
Volume 2 covers the biochemistry and metabolism
of the retinoids and of specific retinoid-binding proteins that are found in plasma and in cells.
Volume 1
April/May 1984, 448 pp., $46.00*/ISBN: 0-12-654501-0
Volume 2
April/May 1984, 464 pp., $48.00*/ISBN: 0-12-654502-9
*Set price for Volumes 1 and 2: $80.00 ($94.00, if purchased separately). Set prices are not valid in Australia or New Zealand.

CELL SEPARATION
Methods and Selected Applications
Edited by THOMAS G. PRETLOW II
and THERESA P. PRETLOW
Volume 3
June/July 1984, 336 pp., $47.50
ISBN: 0-12-654503-1
This treatise presents current methods for obtaining highly purified, viable cells.
Volume 2
1983, 352 pp., $39.50/ISBN: 0-12-654502-3
Volume 1

MOBILE GENETIC ELEMENTS
Edited by JAMES A. SHAPIRO
“A great deal of thought has gone into the book. It is detailed, authoritative and well-illustrated. Throughout, one is solidly in the hands of experts . . . Considering all of these mobile genetic systems side-by-side offers a valuable perspective . . . This book, up to date through 1982, should prove useful for many years to come.”—SCIENCE
1983, 660 pp., $85.00/ISBN: 0-12-638860-3

MONOCLONAL ANTIBODIES
Probes for the Study of Autoimmunity
and Immunodeficiency
Edited by BARTON F. HAYNES
and GEORGE S. EISENBARTH
This book reviews recent advances brought about by monoclonal antibody technology on the role of the thymus in the pathogenesis of autoimmunity and immunodeficiency.
1984, 344 pp., $45.00/ISBN: 0-12-334880-3

THE ENZYMES
Edited by PAUL D. BOYER
FROM REVIEWS OF PREVIOUS VOLUMES IN THE
THIRD EDITION: “The stated purpose of the series is to present fully the information available on enzymes and enzyme catalysis at a molecular level with emphasis on the events of the last ten years.”
—AMERICAN SCIENTIST
Volume 16: LIPID ENZYMOLoGY
Fatty Acids • Glycerides • Phospholipids • Sphingo-
lipids • Glycolipids • Cholesterol • Special Topics.
1983, 720 pp., $79.00/ISBN: 0-12-122716-2
Subscription price: $63.00*
Volume 15: NUCLEIC ACIDS, Part B
1982, 648 pp., $79.50/ISBN: 0-12-122715-4
Subscription price: $65.50*
Volume 14: NUCLEIC ACIDS, Part A
1981, 566 pp., $82.50/ISBN: 0-12-122714-6
Subscription price: $71.50*
*Subscription prices for individual volumes are valid only on orders for the complete set received before publication of the last volume. Subscription prices are not valid in Australia or New Zealand.

Volumes in the MOLECULAR BIOLOGY Series . . .
CALCium and Cell FUNCTION
Edited by WAI YIU CHEUNG
FROM THE PREFACE: The contents of this volume reflect some of the active areas of current research . . . Leaders in the field survey the role of calcium in plants, microtubule assembly, arachidonic acid metabolism, and the regulation of a protease. Three calcium-binding proteins are reviewed: calsequestrin, oncomodulin, and the c-reactive proteins.
Volume 4
1983, 498 pp., $65.00/ISBN: 0-12-171404-7
Subscription price: $52.00*
Volume 3
1983, 528 pp., $64.00/ISBN: 0-12-171403-9
Subscription price: $54.50*
Volume 2
1982, 480 pp., $60.00/ISBN: 0-12-171402-0
Subscription price: $55.00*
Volume 1
1982, 416 pp., $50.00/ISBN: 0-12-171401-2
Subscription price: $49.50*
*Subscription prices for individual volumes are valid only on orders for the complete set received before publication of the last volume. Subscription prices are not valid in Australia or New Zealand.

ENZYME CATALYSIS AND REGULATION
GORDON G. HAMMES
FROM THE REVIEWS: “Overall, the book is well written and reasonably up-to-date. It is recommended for use as either a primary or secondary textbook in an introductory course for students in enzymology and can also serve as a valuable source of basic information for researchers in the field.”
—George L. Kenyon in TRENDS IN BIOCHEMICAL SCIENCE
1982, 288 pp., $34.50/ISBN: 0-12-321980-4 (Cloth)
Send payment with order and save postage and handling. Prices are in U.S. dollars and are subject to change without notice.
Isolate biologically active peptides with higher purity and yield.

Waters preparative chromatographs simplify scaleup for multigram isolations.

**Fast determination of scaleup parameters**

Sample:
- A) 25 μl of 10 mg/ml Polymyxin Peptides
- B) 0.5 ml of 10 mg/ml Polymyxin Peptides

Cartridge:
- A) Radial-PAK™ analytical C18, 8mm x 10 cm
- B) Radial-PAK™ preparative C18, 8 mm x 10 cm

Gradient Conditions:
- Solvent: A) 0.1% TFA in H2O
- Solvent: B) 0.1% TFA in CH3CN
- 0-100% B, linear, 25 min
- Flow Rate: 1.0 ml/min
- Detector: Model 441 Absorbance Detector, 214 nm, 1.0 AUFS

**High resolution, gram-scale gradient separation**

Sample:
- 100 μl of 10 mg/ml Polymyxin Peptides

Cartridge:
- PrepPAK™ preparative C18, 57 mm x 30 cm

Gradient Conditions:
- Solvent: A) 0.1% TFA in H2O
- Solvent: B) 0.1% TFA in CH3CN
- 0-100% B, linear, 25 min
- Flow Rate: 150 ml/min
- Detector: Model 481 Absorbance Detector, 214 nm, 2.0 AUFS

**98+% purity with 90% isolation yield**

Sample:
- 150 μl of Purified Polymyxin Peptides

Cartridge:
- Radial-PAK™ analytical C18, 8 mm x 10 cm

Gradient Conditions:
- Solvent: A) 0.1% TFA in H2O
- Solvent: B) 0.1% TFA in CH3CN
- 0-100% B, linear, 25 min
- Flow Rate: 1.0 ml/min
- Detector: Model 441 Absorbance Detector, 214 nm, 1.0 AUFS

Scale up with Waters preparative chromatographs and achieve higher purity and yield from all your gram-scale isolations.

Call or write Waters today for a demonstration or additional information.
"HERE IS EXCELLENT COMPANY OF THE UNCOMMONEST SENSE." — The New York Times

"Don't you just adore Pluto's Republic?" exclaimed a neighbor of Sir Peter Medawar's on hearing of his interest in philosophy. This struck Sir Peter as the perfect name for the intellectual underworld explored in these essays: the world of misconceptions about science. In this collection of his most famous work, the Nobel Prizewinner takes on Freud, IQ psychologists, social Darwinism, and more. "In these erudite and outspoken essays, Medawar gives us the pleasure of watching a lively and nimble mind at play." — Newsweek

283039-2, $8.95

FROM THE AUTHOR OF "THE SELFISH GENE"

Richard Dawkins proposes a controversial re-interpretation of the concept of evolution — What if we look at evolution as a battle between genes instead of between whole organisms? The changes in phenotypes would thus be seen as serving the evolutionary interests of genes. "This entertaining and thought-provoking book... is an excellent illustration of why the study of evolution is in such an exciting ferment these days." — Christopher Wills, Science

857609-9, $7.95

CHARLES DARWIN—T.H. HUXLEY, AUTOBIOGRAPHIES

Edited with an Introduction by GAvin DE BEER

"It is singularly appropriate that these two autobiographies should be reprinted together, for in the history of science there can hardly have been a more fruitful and essential association of two men of such strikingly different personalities." — Journal of Natural History. The juxtaposition of Darwin's and Huxley's memoirs serves to pinpoint their similarities and differences, and to illuminate their relationship.

285131-4, $5.95

GREAT SCIENTIFIC EXPERIMENTS

Twenty Experiments That Changed Our View of The World

ROM HARRÉ

"Each chapter present[s] an experiment with such crisp clarity and loving attention to details... can be read with great delight by anyone with the slightest interest in the history of science." — Science 83.

286036-4, $8.95

'SUBTLE IS THE LORD...'

The Science and the Life of Albert Einstein

ABRAHAM PAIS

"The biography of Einstein he himself would have liked the best... thoroughgoing, accurate, witty and clear as brook water, it is a work against which future scientific biographies will be measured." — The New York Times Book Review.

520438-7, $12.95
Manville Celite® catalyst carriers feature controlled pore size and surface area.

Celite diatomaceous silica products, derived from fossilized remains of single-cellled plants, are ideal, low-cost catalyst carriers.

In conventional catalysis, the controlled pore size and surface area of Manville Celite carriers, combined with chemical stability, make this series of catalyst carriers ideal for diverse applications and selective reactivity. Available as powders, pellets, or spheres, they are widely used wherever an inert, porous silica support is indicated—for example, the nickel catalyst used in hydrogenation processes, the vanadium catalyst used in the manufacture of sulfuric acid, and the phosphoric acid catalyst of the petroleum industry.

For the biotechnology industry, Manville has designed a new series of carriers for enzyme and microbe immobilization. These carriers allow the use of enzymes or microbes in either continuous or batch processes.

In microbe and enzyme immobilization, properly sized pores maximize the concentration of the enzyme or microbe, offer protection from damaging fluid movement, help protect the enzyme from destructive bacteria within the reactor system, and improve diffusion of the product from the pores.

Manville Research and Development will work with you to develop carriers best suited to your specific applications. For additional information, send in the coupon or call 303-978-2656. For your nearest U.S. sales representative or distributor, call toll-free: 1-800-243-8160 (in CT, 1-800-842-0225). Telex: MANVL DVR 454404.

Billions of tiny plants died in order to give you a better carrier for catalysis and enzyme and microbe immobilization.
"I never knew it was so easy to improve resolution until I attended an LKB Histology Workshop"

“I’d been a histotechnologist for years when I attended my first LKB workshop. I’d done a lot of routine embedding, sectioning and staining, but I never knew there was so much more to it... let alone what a big difference my work could mean. I thought my paraffin sections were pretty good. My boss had talked about improving quality and mentioned plastics, but I’d heard that they were difficult to prepare, messy and toxic. Did I have a lot to learn!

LKB showed me how to use a new water-soluble plastic embedding system – the HistoResin system. It wasn’t difficult at all! I even cut thin serial sections. And what I really liked was seeing that without removing the embedding medium, I could use all the stains I needed – including P.A.P. They also showed me an easy way to cut thin paraffin sections. I cut beautiful 1 micron paraffin sections with the HistoRange microtome.”

Why not fill in the coupon below and see for yourself?

I am interested in obtaining more information about:

- The microprocessor-controlled HistoRange Microtome
- The HistoKnife Maker
- The HistoResin Embedding System
- The LKB Histology Workshop & Seminar Program

If an Eppendorf® Pipette could pipette a sample up to 48 times without refilling, it would look like this.

Imagine an Eppendorf Pipette that dispenses up to 48 times without refilling.
Imagine a pipette that makes serial pipetting at 1-second intervals as easy as pressing a small lever.
Imagine a pipette that eliminates cleaning, contamination and carry-over error problems with interchangeable Combitips, disposable plastic sample reservoirs available in 3 sizes (0.5, 2.5 and 12.5ml capacity).
Imagine a pipette with foolproof 'click-set' volume adjustment dial to select among 5 volume increments for each size Combitip, giving you a choice of 13 different volumes from 10 to 1,250μl.

Only one pipette can do all this with traditional Eppendorf accuracy, precision and operating ease. Only Eppendorf makes it…The Repeater, the new repetitive pipette with disposable Combitips.

For literature, write: Eppendorf Division, Brinkmann Instruments, Inc., Subsidiary of Sybron Corporation, Cantague Road, Westbury, N.Y. 11590, or call 516/334-7500. In Canada: Brinkmann Instruments (Canada), Ltd., or call 416/675-7911.

Corning introduce the Delta range of pH/Ion analyzers which turn science pHiction into science pHact!

The line of five models covers the whole spectrum of applications from routine measurements to sophisticated research work.

Proven advances in microprocessor technology have enabled Corning to produce a family of five high quality reliable products all at sensible prices.

Their robust, ergonomic and stylish design, together with operational aids such as a five language visual instructional display means simple, non-confusing operator sequences, providing confidence in results at all times.

Why not send for further details today?

The difference is DELTA ............... CORNING MAKES THE DIFFERENCE
Everything is going to turn out fine in 30 to 60 seconds.

You don't get any guarantees in scientific research. There's no assurance that what you put in will be what you get out. But because you spend so much valuable time and energy to get good results, there are some things you want to be absolutely sure of—like sample quality.

The Brinkmann homogenizer is as close to a guarantee as you can get. You know that the quality of the specimen you put in will be preserved in the homogenized sample you get out. Coarse, fine, or in between, a uniform sample can be turned out in only 30 to 60 seconds—just what you need and in just the time you need it.

Fast. Within a minute the destructive action of each generator combines direct mechanical shearing with cavitation and sonic energy to give you a faster, more efficient breakdown of material.

Powerful. In addition to having greater torque and longer life, heavy-duty, high-speed 700 W and 1600 W motors have the drive to reach speeds up to 27,000 rpm. At these very high speeds, a vacuum created between the blades and the teeth of the generator causes the sample to explode into a uniformly dispersed homogenate.

Versatile. With 21 interchangeable generators ranging from 7 to 50 mm in diameter and sample volumes ranging from 0.5 mL to 25 L, Brinkmann homogenizers can satisfy all your homogenizing needs.

Although the sample we turn out is an "end product," so to speak, it's really the origin of successful findings. Use the Brinkmann homogenizer and you'll find a whirl of difference—and unsurpassed sample quality that can make a difference in your results.

For more specific details about our homogenizer systems and to get your free new Brinkmann catalog, call 800-645-3050 (in New York State, 516-334-7500). Or write Brinkmann Instruments Co., Division of Sybron Corporation, Cantiague Road, Westbury, NY 11590. In Canada: 50 Galaxy Blvd., Rexdale, Ont. M9W 4Y5.
ANNOUNCING THE LARGEST MULTI-MEDIA PRESENTATION EVER MADE.

No company gives you higher quality media for every application from microbiological to tissue culture. Research, diagnostic and industrial. Defined and semi-defined.

No company makes media for more organisms including bacteria, mammalian cells, fungi, plant cells, insect and amphibian cells.

No company gives you a greater variety in media format. Dry powder, liquid, prepared plates and tubes. No company provides a better choice of packaging from 25 lbs. to 100 ml to a single sleeve of plates.

No company has more experience in developing custom formulations for specific needs. No company can be the single source for media but us.

GIBCO. Quality is a science. Service is an art. For further information, please contact your local GIBCO representative.
Dot-Blotting or Slot-Blotting?

With S&S the choice is yours—Minifold I or Minifold II

Schleicher & Schuell's Minifold® units are uniquely designed for the immobilization of multiple samples of DNA or RNA without cross lateral flow. Both units are particularly useful for the covalent, anionic or adsorptive binding of nucleic acids in conjunction with the appropriate S&S binding medium (e.g., S&S NC™ nitrocellulose). Both are precision-tooled from rugged, polished acrylic.

The Minifold I features 96 sample wells designed in the Microtiter® format to facilitate sample handling. Each sample well is sealed with a silicone O-ring. The large filtration area per well (0.32 cm²) makes the Minifold I ideal for the screening of DNA clones and optimizes the immobilization of mRNA in the Quick-Blot™ technique.

The Minifold II offers a convenient method for quantitating multiple nucleic acid samples. Each of the 72 sample wells has a very small filtration area (6.0 mm²), resulting in a greater concentration of nucleic acids on the filter medium. The slot format of the Minifold II sample wells enhances DNA or RNA sample quantitation by densitometry.

Dot-blotting or slot-blotting: S&S is the only company that gives you a choice.

Contact S&S for further information.

The New Bio-Response MCT* (Mass Culturing Technique) System Delivers Monoclonal Antibodies And Other Mammalian Cell Products When You Need Them—From Grams To Kilograms.

Insufficient quantities of desired peptides are a key cause of expensive research and production delays. The MCT system is a new and unique mammalian cell culturing process designed to overcome the obstacle of insufficient quantities of peptides by delivering the quantity you need...when you need it! Additionally, every step in MCT production has been developed to contain costs now and in the future while maintaining exceptional purity and quality in mammalian cell proteins.

**Quantity**
Unlike conventional cell-culture methods, the MCT system uses "fresh," free-flowing lymph directly from a cow. Following treatment, the lymph is continuously diffused into and out of a growth chamber. This nearly in vivo growth environment stimulates continuous and optimal protein secretion. The result? Large quantities of desired proteins enabling you to move to the clinic or market...faster.

**Cost**
Unlike conventional cell-culture methods that require extensive labor forces and expensive growth media, Bio-Response's MCT is a closed, steady-state system. In essence, the MCT system starts with a low-cost lifeline—a feeding cow—and ends with a pure, quality product. MCT...an optimal system at low cost.

**Purity**
Unlike conventional cell-culture methods, the MCT system is designed to insure purity without tedious processing. By directing the lymph across semi-permeable membranes, MCT provides both separation of media protein from desired cell products, and a continuous nutrient flow. The ability to add or withdraw from the chamber to maintain optimal cell density permits continuous harvest of a highly pure product.

**Quality**
Unlike conventional methods of production that attempt to create biologically active mammalian cell products, the MCT system provides a pure-mammalian product—an exact copy of the original protein and, in the case of non-antibody polypeptides, uncompromised by inappropriate glycosylation and disulfide bond formation. There is a growing consensus favoring products produced in a mammalian cell-culture system, such as the Bio-Response MCT system.

For further information, call Bio-Response, Inc. at (415) 786-9744.
