American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are the furtherance of science, to facilitate cooperation among them, to foster scientific freedom and responsibility, to advance the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Scanning electron micrograph of murine B16-F10 melanoma cells binding to a cryostat section of murine lung (about ×21,000). These metastatic tumor cells adhere preferentially to the tissues that they colonize in vivo. See page 1113. [Samples were prepared and photographed by Peter A. Netland and Bruce R. Zetter in collaboration with William J. Landis and Karen J. Hodgens, Children’s Hospital, Boston, Massachusetts 02115]
