Microbiologist. M.S., 5 years of industrial R & D experience in vaccine development and licensing. Recent work in in vitro and in vivo experimental and clinical microbiology. University and industrial research background in virology, bacteriology, fermentation technology, and animal and human disease and vaccine research and development. Experience. Presentations and publications. Desires a challenging position. Will relocate. Box 161, SCI-
ENCE.

NMR Spectroscopist. Seeking an opportunity to work in NMR imaging at a teaching hospital, and other places with NMR Imaging. Box 166, SCI-
ENCE.

Assistant Professor of Biochemistry. Tenure track. January or July 1985. Candidate should have Ph.D. and postdoctoral training in biochemistry and teaching. Research area not specified. Preference given to applicants with postdoctoral training in the area of biochemistry and who have postdoctoral experience in the area of proteinase inhibition. The Department of Chemistry at Purdue University seeks applications for an Assistant Professor position in the area of synthetic organic chemistry. The appointee will be expected to develop an active research program and to teach in the area of synthetic organic chemistry. The candidate should have a Ph.D. in synthetic organic chemistry and postdoctoral experience. Teaching will be at the undergraduate and graduate levels. Salary: $10,400. Send one copy of curriculum vitae and a complete reference to: Dr. Robert C. Scherago, Head, Department of Chemistry, Purdue University, West Lafayette, Indiana 47907. Applications are due on or before 15 July 1985.

Teaching: 1 January 1985 and 1 September 1985. Qualifications include a Ph.D. in biochemistry or a closely related discipline, research experience in the area of carbohydrate chemistry, and a strong commitment to teaching. Salary: $15,000. Send one letter of recommendation to: Dr. James B. Mitchell, Chair, Department of Biochemistry, University of Arkansas for Medical Sciences, Little Rock, AR 72205.

Box 164, SCIENCE.

Information for Contributors

The Editors of *Science*

Papers in *Science* often receive far more attention than those in specialty journals. Hence the rate of submission is high, about 5000 papers each year, and the rate of rejection is high, about 80 percent. Since most of the papers submitted are of publishable quality, the editors use several criteria, in addition to the recommendations of referees, in selecting papers for publication. Preference is given to papers of general significance that are well written, well organized, and intelligible to scientists in different disciplines. An attempt is made to balance the subject matter in all sections of *Science*. Membership in AAAS is not a factor in selection.

Most papers are evaluated by two or more outside referees. Some papers may be returned to the authors without external review if they exceed the length limits or if they are judged unlikely to be chosen for publication. Referees are selected from *Science* files as well as from lists provided by authors. Papers that depend on statistical inference for their conclusions may also be sent to statisticians.

Papers accepted for publication are edited to improve the accuracy and effectiveness of communication and to bring them within the specified length limits. When the author’s meaning is not clear, the editor may consult the author by telephone; when editing is extensive, the manuscript may be returned to the author for approval or further adjustment before the type is set.

Six types of signed papers are published: General Articles, Research Articles, Reports, Letters, Technical Comments, and Book Reviews.

**General Articles**

About half the General Articles published in *Science* are solicited. Both solicited and unsolicited articles undergo review. General Articles are expected to (i) provide a review of new developments in one field that will be of interest to readers in other fields, (ii) describe a current research problem or a technique of interdisciplinary significance, or (iii) present a study of some aspect of the history, logic, philosophy, or administration of science or a discussion of science and public affairs. Readers should be able to learn from a General Article what has been firmly established and what are significant unresolved questions; speculation should be kept to a minimum.

General Articles should include an author note giving names, addresses, and positions of the authors; a summary (50 to 100 words); and brief subheadings to indicate the main ideas. The reference list should not be exhaustive; a maximum of 40 references is suggested.

**Length limit.** Up to 5000 words (approximately five printed pages), including references and notes and figure and table legends. Figures and tables together should occupy no more than one printed page.

**Research Articles**

Research Articles are expected to contain new data and to represent substantial contributions in their fields. They should include an author note giving names, addresses, and positions of the authors; an abstract (50 to 100 words); and brief subheadings to delineate the main sections of the text. The text should include a short introductory section outlining the main point of the paper, a description of the experiments and the results, and then a discussion or conclusion. A maximum of 30 references is suggested.

**Length limit.** From 2000 to 4000 words (3 to 3½ printed pages) including references and notes and figure and table legends. Figures and tables together may occupy up to one printed page.

**Reports**

Reports are expected to contain solid research results or reliable theoretical calculations. Preference is given to reports that describe discoveries that will be of broad interdisciplinary interest or of unusual interest to the specialist. They should include an abstract (50 to 100 words) and a reference list; complete documentation need not be presented but should be available in cited references. A maximum of 20 references is suggested.

**Length limit.** Up to 2000 words (approximately 1 to 1½ printed pages), including references and notes and figure and table legends. Figures and tables should together occupy no more than half a printed page.

**Letters**

Letters are selected for their pertinence to material published in *Science* or because they discuss significant problems of interest to scientists in general. Letters pertaining to material published in *Science* may correct errors, provide support or agreement, offer different points of view, clarify, or add information. Personal remarks about another author are inappropriate. Outside reviewers may be consulted. The selection of letters is intended to reflect the range of opinions received.

When a letter refers to an Article or Report published in *Science*, the original author is usually given an opportunity to reply. Letters are acknowledged by postcard. Authors whose letters are accepted are so notified. Letters must be typed with double-spacing; they are frequently shortened.

**Length limit.** Preference is given to letters that do not exceed 250 words.

**Technical Comments**

Technical Comments may criticize Articles or Reports published in *Science* or offer useful additional information. Discussions of minor issues or priority claims are not appropriate, nor are questions that can be resolved by private correspondence. The authors of the original paper are usually asked for an opinion of the Comments and are given an opportunity to reply in the same issue if the Comments are accepted. The Comments, and sometimes the reply, are subjected to the usual review procedures. Technical Comments are published at the end of the Reports section.

**Length limit.** Up to 500 words, including references and notes.

**Book Reviews**

The selection of books to be reviewed and of reviewers is made by the editors. Instructions and length specifications accompany the books when they are sent to reviewers.
Submission of Manuscripts

Submit an original and two duplicates of each manuscript, together with a letter of transmittal giving:

1) the names and telephone numbers of the authors;
2) the title of the paper and a statement of its main point;
3) three to eight keywords to be used for indexing;
4) the names, addresses, telephone numbers, and fields of interest of four to six persons in North America but outside your institution who are qualified to referee your paper;
5) the names of colleagues who have reviewed your paper;
6) the total number of words (including text, references, and figure and table legends) in your manuscript; and
7) a statement that the material has not been published and is not under consideration for publication elsewhere.

Address the manuscript to the Editor, *Science*, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005.

Authors will usually be notified of acceptance, rejection, or need for revision in 6 to 8 weeks (Research Articles and Reports) or 8 to 10 weeks (General Articles).

When a paper is accepted for publication in *Science* it is understood by the editors that any new cell line, virus strain, or monoclonal antibody described or used as a reagent in the experiments reported, or any sample on which the conclusions of the paper depend, will be made available to other bona fide scientists for further experimentation.

It is also understood that a paper accepted by *Science* will not be released to the press or the public prior to its publication. Any exceptions to this embargo should be discussed with the editors in advance.

Manuscript Preparation

Typing. Use double-spacing throughout the text, tables, figure legends, and references and notes. Put your names on each page and number the pages, starting with the title page.

Titles. Titles should be short. For General Articles the maximum length is 52 characters including spaces; for Research Articles and Reports the maximum is 108 characters.

Summary or abstract. These should convey to the general reader the main point of the paper and outline the results or conclusions.

Text. A brief introduction should portray the broad significance of the paper. The whole text should be intelligible to readers in more than one discipline. Technical terms should be defined.

Units of measure. Use metric units. If measurements were made in English units, give metric equivalents.

Symbols and abbreviations. Define all symbols, abbreviations, and acronyms.

References and notes. Number references and notes in the order in which they are cited in the text. Place references cited only in tables or figure legends after the text references. For abbreviations of journal titles see: (i) *Serial Sources for the BIOSIS Database* (BioSciences Information Service, Philadelphia; published annually each January); (ii) *Chemical Abstracts Service Source Index* (CASSI), 1907–1974 cumulative and its 1975–1979 quarterly supplements (Chemical Abstracts Service, Columbus, Ohio, 1975–1979 and supplements); or (iii) *Publications Indexed for Engineering (PIE)* (Engineering Index, Inc., New York; published annually). For journals not listed in these sources provide full titles. For references with up to five authors provide all the names; for more than five, provide the name of the first author only. Use the following forms:

Acknowledgments. Gather all acknowledgments into a brief statement at the end of the references and notes.

Figures. For each figure submit three glossy prints of sufficient size to permit relabeling, if necessary, but not larger than 216 by 279 millimeters (8½ by 11 inches). Label each on the back with the name of the author and the figure number and indicate the correct orientation. Authors requesting the use of color are usually asked to pay $600 for the first figure and $300 for each additional figure. These charges are applied to cover the cost of reprints. Cite all figures in the text and provide a brief legend for each on a separate sheet.

Tables. Type each table, with its legend, on a separate sheet. Give each table a number and cite it in the text. Give each column a heading with units of measure indicated in parentheses. Do not change the unit of measure within a column.

Equations and formulas. Use quadruple-spacing around equations and formulas that are to be set off from the text. Define all symbols.

Printing and Publication

Proofs. One set of galley proofs is provided for each paper. Alterations should be kept to a minimum. Extensive alterations may delay publication.

Scheduling. Papers are scheduled for publication after *Science* has received corrected galley proofs from the authors. The time between acceptance of papers and mailing of galley proofs to authors may be 4 to 8 weeks (allowing for editing and typesetting); the time between receipt of authors' galley proofs by *Science* and publication may be 4 to 6 weeks (allowing for proofreading, layout, and paging). There may be delays for papers with tables or figures that present problems in layout, for papers accompanied by cover pictures, and for papers that exceed the length limits.

Reprints. An order blank for reprints accompanies proofs.

Cover Photographs

Particularly good photographs that pertain to a paper being submitted will be considered for use on the cover. Submit prints (not slides, negatives, or transparencies) with the manuscript and indicate in the letter of transmittal that a possible cover picture is enclosed.
