SCIENCE is published weekly on Friday, except the last week in December, by the American Association for the Advancement of Science, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005. Second-class postage (publication No. 484460) paid at Washington, D.C., and at an additional entry. Authorized as a business publication at the post office at Mail Agreement Number 4005. Copyright © 1984 by the American Association for the Advancement of Science. Domestic individual membership and subscription (51 issues): $56. Domestic institutional subscription (51 issues): $93. Foreign postage extra: Canada $24, other (surface mail) $30, air-mail via Amsterdam $65. First class, airmail, school-year, and student rates on request. Single copies $2.50 ($3 by mail); back issues $2 ($3.50 by mail); Biotechnology issue, $5 ($5.50 by mail); classroom rates on request. Change of address: allow 6 weeks, giving old and new addresses and seven-digit account number. Authorization to photocopy material for Internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of $1 per copy plus $.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075/84/$3.00 + $1.00.

BOOK REVIEWS

Cockcroft and the Atom, review by P. K. Hoch; Otto Hahn and the Rise of Nuclear Physics, A. Q. Morton; The Global Climate, R. E. Dickinson; Neuronal Operations in the Visual Cortex, J. H. Kaas; Molecular Neurobiology, L. L. Iversen; Book Received .................................................. 1465

REPORTS

Sieve Cells in Phloem of a Middle Devonian Progymnosperm: D. C. Wight and C. B. Beck ............................................................ 1469
Rayleigh-Benard Convection in an Electrochemical Redox Cell: W. J. Ward III and O. H. Le Blanc, Jr. ............................................. 1471
Human T-Cell Leukemia Virus (HTLV-I) Antibodies in Africa: W. Saxinger et al. ................................................................. 1473
Sulfation and Phosphorylation of the Neural Cell Adhesion Molecule, N-CAM: B. C. Sorkin et al. .................................................. 1476
Tactics of Acclimation: Morphological Changes of Sponges in an Unpredictable Environment: S. R. Palumbi ........................................... 1478
Pargyline Prevents MPTP-Induced Parkinsonism in Primates: J. W. Langston et al. ................................................................. 1480
δ-Aminolevulinic Acid-Synthesizing Enzymes Need an RNA Moiety for Activity: D.-D. Huang et al. .................................................. 1482
Functional Properties of Antigen-Specific T Cells Infected by Human T-cell Leukemia-Lymphoma Virus (HTLV-I): H. Mitsuya et al. ................. 1484
Adaptive Immunotherapy of Established Pulmonary Metastases with LAK Cells and Recombinant Interleukin-2: J. J. Mulé et al. ......................... 1487
Inhibition of Collagen Fibril Formation in Vitro and Subsequent Cross-Linking by Glucose: Y.-H. Lien et al. ........................................ 1489
Flotation of the Bivalve Corbicula fluminea as a Means of Dispersal: R. S. Prezant and K. Chalermwat ........................................................ 1491
Event-Related Brain Potentials in Boys at Risk for Alcoholism: H. Begleiter et al. ................................................................. 1493
Neuroendocrine Response to Estrogen and Sexual Orientation: B. A. Gladue, R. Green, R. E. Hellman .................................................. 1496
Plasticity of Substance P in Mature and Aged Sympathetic Neurons in Culture: J. E. Adler and I. B. Black .................................................. 1499

COVER

Demosponge (Halichondria panicea) encrusting an intertidal surge channel in Torch Bay, Alaska. Sponge morphology varies in a sophisticated way with wave action. In changing environments, sponges begin production of wave-tolerant tissues more quickly than wave-intolerant tissues. This reduces the risk of catastrophic tissue loss in an unpredictable environment. See page 1478. [S. R. Palumbi, Department of Zoology, University of Washington, Seattle 98195]
