SCIENCE is published weekly on Friday, except the last week in December, by the American Association for the Advancement of Science, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005. Second-class postage (publication No. 409/401) paid at Washington, D.C., and at an additional entry. Now combined with The Scientific Monthly. Copyright © 1935 by the American Association for the Advancement of Science. Domestic individual membership and subscription ($1 issue): $56. Domestic institutional subscription ($1 issues): $93. Foreign postage extra: Canada $24, other (surface mail) $23, air service via Amsterdam $65. First class, airmail, school-year, and student rates on request. Single copies $2.50 ($3 by mail); back issues $5 ($5.50 by mail); Pharmacology issue, $5 ($5.50 by mail); classroom rates on request. Change of address: allow 6 weeks, giving old and new addresses and seven-digit account number. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and others registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of $1 per copy plus $0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075.63 $1.10. Postmaster: Send Form 3579 to Science, 1515 Massachusetts Avenue, NW, Washington, D.C. 20005. Science is indexed in the Reader's Guide to Periodical Literature and in several specialized indexes.
Isolated Singular Points on Complete Intersections, reviewed by H. C. Pinkham; The Solar Granulation, S. L. Keil; European Mires, A. W. H. Damman; Cellular Ageing, G. Martin; Reprints of Books Previously Reviewed; Books Received

Multiple Organ Carcinogenicity of 1,3-Butadiene in B6C3F1 Mice After 60 Weeks of Inhalation Exposure: J. E. Huff et al.

Variegated Glacier (Alaska) in full surge, 4 July 1983. View is upstream from a point 5 kilometers from the terminus. It shows the extreme fracturing (crevassing) and bulging, or arching up, of the ice caused by the surge. Ice in the middle ground is moving toward the camera at a speed of about 30 meters per day. In the foreground is a lake (with icebergs) formed by welling up of highly turbid (brown) water in the large crevass (left foreground), from which the water flows out to the glacier margin. This water comes from the glacier bed and its upwelling is an indication of high pressure in the basal system. See page 469. [Elise Mezger, California Institute of Technology, Pasadena 91125]
