This Week in Science

LETTERS

"Nuclear Winter" Models: A. E. Strong; Verification of Nuclear Testing: J. F. Evernden; W. J. Hannon

EDITORIAL

A Welcome Grace Note

ARTICLES

Positron Emission Tomography: Human Brain Function and Biochemistry: M. E. Phelps and J. C. Mazziotta

Human GM-CSF: Molecular Cloning of the Complementary DNA and Purification of the Natural and Recombinant Proteins: G. G. Wong et al.

Genes-in-Pieces Revisited: W. Gilbert

BOOK REVIEWS

Darwin's Earliest Letters: S. S. Schweber; other reviews by D. C. Cassidy, E. C. Patterson, K. Szymborski, P. H. Abelson .......................... 838

On Technological Catastrophe: L. Hirschhorn; other reviews by L. Cohen, B. A. Bolt, A. Levine, D. Landy ................................. 846

An Academic Preeminence: J. H. Turner; other review by J. Gilbert ................................. 851

An Anniversary in Astronomy: V. R. Eshleman; other reviews by L. M. Brown, G. Bertsch, P. R. Vogt ................................. 854

A Biologization at Stake: M. J. West; other reviews by R. J. Richards, R. Fendrich, R. Blake ................................. 860

Issues of Gene Regulation: G. D. Ginder; other reviews by H. C. Hartzell, R. Aldrich ................................. 865

The Emergence of Homo sapiens: R. H. Tuttle; other reviews by D. K. Grayson, R. E. Morlan ................................. 868

Books Received .................................................. 876

Books Reviewed in Science .................................................. 902

REPORTS

Occurrence of Giant Impacts During the Growth of the Terrestrial Planets:
G. W. Wetherill .................................................. 877

Expression of the Major Surface Antigen of Plasmodium knowlesi Sporozoites in Yeast: S. Sharma and G. N. Godson .................................................. 879

Modulation of the sis Gene Transcript During Endothelial Cell Differentiation in Vitro: M. Jaye et al. .................................................. 882

Matrix-Driven Translocation of Cells and Nonliving Particles:
S. A. Newman et al. .................................................. 885

High-Affinity Uptake of Serotonin into Immunocytochemically Identified Astrocyes: H. K. Kimelberg and D. M. Katz .................................................. 889

Retinal S Antigen Identified as the 48K Protein Regulating Light-Dependent Phosphodiesterase in Rods: C. Ffister et al. .................................................. 891

Cassette of Eight Exons Shared by Genes for LDL Receptor and EGF Precursor:
T. C. Südhof et al. .................................................. 893

Sex Ratio Adjustments in Fig Wasps: E. A. Herre .................................................. 896

Multiple Circadian Oscillators Regulate the Timing of Behavioral and Endocrine Rhythms in Female Golden Hamsters: J. M. Swann and F. W. Turek .................................................. 898

Technical Comment: Diurnal Rhythms of N-Acetylserotonin and Serotonin in Cerebrospinal Fluid of Monkeys: P. A. Taylor et al. .................................................. 900

COVER

Silhouettes of most of the extinct late Pleistocene Australian vertebrate species, drawn to scale. The height of the kangaroo in the center of row S is about that of an adult human male. [From Peter Murray, "Extinctions down-under: A bestiary of extinct Australian late Pleistocene monotremes and marsupials," in Quaternary Extinctions (Paul S. Martin and Richard G. Klein, Eds.), reviewed on page 870]
