This Week in Science ................................. 7

LETTERS AIDS Repository; R. A. Kaslow; Biogeographic Methods; I. M. Henderson; L. G. Abele; Molecular Evolutionary Clocks: P. D. Gingerich ............. 8

EDITORIAL The Undesirability Principle .................................................. 9

ARTICLES Opportunities in Magnetic Materials: R. M. White ................................. 11

The Granulocyte-Macrophage Colony-Stimulating Factors: D. Metcalf ................. 12

NEWS AND COMMENT "Star Wars" Tests and the ABM Treaty .................................... 29

Soviets Play Tit-for-Tat ............................................................................. 30

A $9.5-Billion Plan for Facilities ............................................................... 31

Global Cooperation in Big Science ................................................................ 32

NIH Bills Moving Through Congress ................................................................ 33

How Safe Are Engineered Organisms? ......................................................... 34

Briefing: NRC Stands by Its Rule on University Reactors; Europe Agrees on Joint Defense Research Program; Comings and Goings; DOE Faces Suit Over Enrichment Decision ................................................................. 36

RESEARCH NEWS More About the HTLV's and How They Act ........................... 37

Sodium Atoms Stopped and Confined ......................................................... 39
BOOK REVIEWS

Food Acquisition and Processing in Primates, reviewed by W. G. Kinsey; A Woman’s Quest for Science, J. Modell; Renormalization, J. H. Lowenstein; Perspectives on Coral Reefs, L. S. Land; Books Received................................. 42

REPORTS

Measurements of the Large-Scale Direct-Current Earth Potential and Possible Implications for the Geomagnetic Dynamo: L. J. Lanzerotti et al. ................. 47

A Unique Symbiosis in the Gut of Tropical Herbivorous Surgeonfish (Acanthuridae: Teleostei) from the Red Sea: L. Fishelson, W. L. Montgomery, A. A. Myrberg, Jr. .................................................. 49

Dominance in Physiological Phenotypes and Fitness at an Enzyme Locus: T. J. Hilibish and R. K. Koehn................................................................. 52

The x Gene Is Essential for HTLV Replication: I. S. Y. Chen et al. .............. 54

Steroid-Dependent Survival of Identifiable Neurons in Cultured Ganglia of the Moth Manduca sexta: K. L. Bennett and J. W. Truman ...................... 58

Reexamination of Glucose-6-Phosphatase Activity in the Brain in Vivo: No Evidence for a Futile Cycle: T. Nelson et al. ........................................... 60

Regional Brain Dopamine Metabolism: A Marker for the Speed, Direction, and Posture of Moving Animals: C. R. Freed and B. K. Yamamoto ........... 62

A Role for Glycosylation of the α Subunit in Transduction of Biological Signal in Glycoprotein Hormones: M. R. Sairam and G. N. Bhargavi ............. 65

Thyrotropin-Releasing Hormone Induces Rhythmic Bursting in Neurons of the Nucleus Tractus Solitarius: M. S. Deks, G. B. Richerson, P. A. Getting ...... 67

Trans-Activator Gene of Human T-Lymphotropic Virus Type III (HTLV-III): S. K. Arya, C. Guo, S. F. Josephs, F. Wong-Staal ........................................ 69

Location of the Trans-Activating Region on the Genome of Human T-Cell Lymphotropic Virus Type III: J. Sodroski, R. Patarca, C. Rosen, F. Wong-Staal, W. Haseltine....................................................... 77

Immunocytochemical Detection of Acetylcholine in the Rat Central Nervous System: M. Geffard, A. McRae-Degueurce, M. L. Souan ......................... 79

Ribonuclease P Catalysis Differs from Ribosomal RNA Self-Splicing: T. L. Marsh and N. R. Pace ................................................................. 79

Preparation of Bispecific Antibodies by Chemical Recombination of Monoclonal Immunoglobulin G1, Fragments: M. Brennan, P. F. Davison, H. Paulus .... 81

COVER

Live specimens of an undescribed symbiont from the gut of the most common surgeonfish in the northern Red Sea; photographs were taken 15 to 20 minutes after capture of the host. Little information is available about the identity or possible roles of intestinal symbionts of herbivorous reef fishes. See page 49. [Yehuda Cohen, Steinitz Marine Biological Laboratory, Eilat, Israel]
