COVER
Extremely rare tyrosinase-negative albino cat (cc) which completely lacks melanin pigmentation. Homozygous albinos (cc) and normally pigmented cats which carry the recessive allele for tyrosinase-negative albinism (Cc) exhibit congenital visual system defects. One to 2 percent of the human population carries a recessive allele for albinism. See page 1395. [Donnell J. Creel, Veterans Administration Medical Center, Salt Lake City, Utah 84148]
