AffiPure™ Antibodies to a transforming growth factor and oncogene proteins are produced in sheep against synthetic peptides. Use of affinity-purified chromatography yields antibodies which are monospecific and greatly reduces non-specific reactions.

Triton Biosciences Inc. now offers:

- RasHc p21 AffiPure™ Antibody
- α' TGF AffiPure™ Antibody
- RasKl/Ha p21 AffiPure™ Antibody
- Fes p85 AffiPure™ Antibody

AffiPure™ Antibodies are valuable research tools for scientists working in the fields of TGF's and oncogenes. Triton Biosciences' commitment to providing a continuous source of biological reagents to the cancer-related research community is strengthened by our expanded facilities, increased human resources and our encouragement of working communications with institutions and independent researchers.

Circle No. 124 on Readers' Service Card

A continuing source of biological reagents from Triton Biosciences Inc.
Well to begin with, you won’t compromise high sample load with poor resolution. In fact, our way gives you 10 times greater load and also 10 times better resolution – at the same time!

Sounds too good? Just try advanced electrofocusing by using Immobiline. It’s the only system available that lets you immobilize the pH gradient within the gel, puts an end to drift, cuts out conductivity gaps and gives you infinite stability.

Look up J. Biochem. Biophys Methods 8 (1983) 157–172, and find out how preparative electrofocusing separates proteins in quantities of up to 1 gram – completely free from low molecular weight contaminants. Better still, just fill in the coupon and get all the facts. Or try it straight away, and I’ll see that we give you an attractive discount on your first order.
New standards of vibration isolation

**MICRO-g® systems**

- Standard Post-Mount Isolators combined with Series 76 Honeycomb Tops achieve exceptional levels of attenuation and damping.
- Gimbal Piston isolators attenuate both vertical and horizontal vibration in a single compact module. Wide range of load ratings.
- New Series 76 honeycomb core tops offer superior damping, rigidity and structural integrity.
- Standard sizes to 4' x 12'; top thickness 2", 4", 8" and 12'.

**BURN YOUR REFERENCE CARDS!**

**REF-11™**

Computerizes your REFERENCES and prepares your BIBLIOGRAPHIES

- Maintains a data base of references
- Searches for any combination of authors, years of publication, reference title (or any words in the title), and topics covered by the reference
- Formats bibliographies exactly as you want them
- Alphabetizes references
- Abbreviates journal titles
- Runs on any video terminal and printer
- Menu driven dialogue
- Compact storage format
- 20 lines of comments for each reference

**IBM PC/XT/AT, MS-DOS, CP/M 80...**

$195.00

**RT-11, TSX-Plus, RSX-11, P/OS...**

$250.00

**VAX/VMS (native mode)...**

$350.00

**Science, Arms Control & National Security**

This pressing issue for all scientists is the focal point of these new titles from AAAS:

To order, write to: Committee on Science, Arms Control, and National Security, AAAS, 1333 H Street, NW, Washington, DC 20005.

(* Please add 81.50 postage and handling per order. Allow 4–6 weeks for delivery. AAAS members receive a 20 percent discount on listed prices.)
THE FIFTH ANNUAL CONGRESS FOR
HYBRIDOMA RESEARCH
JANUARY 26 - 29, 1986
Baltimore Convention Center, Baltimore, Maryland

Co-Chairmen:
Zenon Steplewski, The Wistar Institute, Philadelphia, PA • Hilary Koprowski, The Wistar Institute, Philadelphia, PA • Joseph Davie, Washington University, St. Louis, MO

Keynote Speaker: Mark Davis, Stanford University, Stanford, CA
Title: T-cell Receptor Gene Structure and Function.

We are planning six Working Group Meetings on “MURINE MONOCLONAL ANTIBODIES Available for Clinical Application”. These Group Meetings will be restricted to 20 participants each in the following fields:

Group A: Immunohistological Diagnosis
Leader: J. Schlom, NCI, Bethesda, MD
Reporteur: M. Nui, Laboratorio Di Immunologia, Rome, Italy

Group B: Radiolabeled Imaging
Leader: J.-F. Chatel, Center Rene Gauducheau, Nantes, France
Reporteur: J. P. Powe, Victoria Hospital, Ontario, Canada

Group C: Antibodies Shed by Tumor Cells
Leader: R. Bast, Duke University, Durham, NC
Reporteur: J.-Y. Douillard, Center Rene Gauducheau, Nantes, France

It is our intent to select participants actively involved in the above listed research for in-depth discussion of progress made recently.

The entire day of Monday, January 27, 1986 will be available for these group discussions. The consensus reached by the groups will be presented by the Reporteurs to the whole Congress and results of these discussions will be published in Hybridoma.

Investigators interested in participating in Group Meetings should send a short summary to Dr. Ralph Reisfeld, Scripps Clinic and Research Foundation, 10666 North Torrey Pines Road, La Jolla, California 92037 by November 30, 1985.

Workshop Topics & Chairmen:
HUMAN REPERTOIRE and AUTOIMMUNE DISEASE
A. Notkins, NIH, Bethesda, MD.
GENETIC PROBES
J.D. Capra, University of Texas, Dallas, TX

MONOClonAL ANTIBODIES in DISSECTING NORMAL and MALIGNANT STEM CELLS
I. Bernstein, Fred Hutchinson Cancer Center, Seattle, WA.
ISOTYPE SWITCH VARIANTS in ANALYSIS of ANTIBODY FUNCTION
M. Schart, Albert Einstein College of Medicine, New York, NY.

Poster Sessions: TECHNOLOGICAL ADVANCES in HYBRIDOMA RESEARCH
Participants are invited to submit abstracts for the poster sessions. These abstracts will be reviewed up until the time of the meeting; however, only those accepted by Nov. 15 will be published in the journal, Hybridoma. Contact Dr. Zenon Steplewski (215) 898-3924.

REGISTRATION FEES:
$400 On-site registration — includes a one year subscription or renewal to the journal, Hybridoma.
$350 ADVANCE REGISTRATION — (Received by Nov. 15) — Includes a one year subscription or renewal to the journal, Hybridoma.
$75 STUDENT REGISTRATION — Student status must be confirmed in writing by department chairman.
4-7 registrations received together from same organization $300 each. Includes 4 journal subscriptions only.
8-10 registrations received together from same organization $200 each. Includes 4 journal subscriptions only.

Larger group rates available upon request.
Cancellations must be received in writing by December 19, 1985.

Organized by Scherago Associates, Inc., in conjunction with the journal Hybridoma.

S-10-11

□ Please reserve space(s): Registration Fee of $ enclosed.
□ Please send abstract form.

continuity of life
quest for knowledge
resolution
The Neurosciences Institute announces that its facilities are open to interested scientists for the forthcoming academic year. Located on the campus of The Rockefeller University, the Institute provides opportunities for individuals and small groups to design their own experiments or to develop theoretical constructs within a broad range of disciplines related to the neurosciences. Although laboratory facilities are not available, convenient arrangements can be made for planning and review of experimental and theoretical work. Scientists from several disciplines may meet to discuss specific experimental plans; alternatively, facilities can be provided for those already working in collaborative arrangements. Resources are also available for preparation of scientific reviews or monographs; a publications program is available for interested authors.

Fellows design their own programs and arrange their own schedules. In addition, they are encouraged to invite visitors or hold small conferences with colleagues from other institutions. Housing, travel expenses, and per diem allowances are provided. Periods of stay may range from several days to half a year, during which time ample occasions exist for interactions with other Fellows and visitors to the Institute. Opportunities for Junior Fellows at the graduate student and postdoctoral levels are available under the sponsorship of Fellows. An expert staff is available to aid Fellows and visitors in the use of Institute facilities, which include:

- an extensive neurosciences library
- individual office space and conference areas
- special computing resources for neural modeling and theoretical work
- editorial, bibliographic, and secretarial assistance

Proposals for use of the Institute's resources should be made by means of a two- or three-page letter including a description of scientific or scholarly plans, anticipated length of stay, and any special requirements of the proposed program. A Descriptive Guide reviewing the facilities and application procedures in further detail will be sent upon request.

For further information, write or call Dr. W. Einar Gall, Research Director, The Neurosciences Institute, 1230 York Avenue, New York, New York 10021, telephone (212) 570-8975.

**Concentrate 200 Samples without BUMPING and achieve 100% sample recovery**

Most laboratories report to us that they never realized how much sample they were losing until they used "Speed Vac"...The ease of sample preparation is also a big advantage...Place your samples in individual tubes or vials and turn "Speed Vac" "ON"...No cross contamination, no losses, no creeping, no foaming and the samples will be concentrated at the bottom of the tube...

How else can you concentrate "1 or 200" samples with such ease and efficiency.

- **HPLC** sample preparation where a dried, concentrated sample is important.
- **HPLC** sample preparation...as above.
- **PHOSPHOLIPID** separation by HPLC — total evaporation of Acetonitrile — Water Solvent.
- **INTERFERON** purification by dialysis and evaporation.
- **TRI-CYCLOG** anti-depressant drug blood levels measured after a series of extractions and evaporation to dryness.
- **HORMONE** and Enzyme assays.
