A new book from AAAS
on the benefits and hazards of
the new biotechnology:

Biotechnology and the Environment Risk and Regulation

Edited by Albert H. Teich,
Morris A. Levin, and Jill H. Pace

The new biotechnology, based on research using recombinant DNA, cell fusion, and similar techniques, has progressed from the laboratory stage to practical application in fields such as medicine, agriculture, chemicals, and environmental protection. But as the commercialization of biotechnology proceeds, so too do questions of potential hazards and government regulation.

This book presents the results of a seminar series on environmental aspects of biotechnology conducted by AAAS for the U.S. Environmental Protection Agency. Of interest to all government policymakers, members of the biotechnology industry, researchers, lawyers, scholars, and students, this volume includes the edited and updated seminar papers, each with the questions and answers that followed the original presentation.
