Science is indexed in the Reader's Guide to Periodical Literature and in several specialized indexes. The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.
COVER  Peculiar galaxy Arp 230, believed to be the remnant of a recent merger of two galaxies. The striking, sharp-edged ripples on either side of the center consist mostly of old stars that may have belonged to an intruding disk galaxy. Model calculations suggest that this intruder plunged into the main galaxy on a near-radial orbit. Gaseous debris, dust, and young stars form a disk seen here as black oval near the center.
