Bio-Rad's new MAPS™ Preparative System 100.

It isn't quite correct to call it a machine. But the System 100 does churn out a lot of work in a short time. Specifically, it can purify up to 0.5 grams of monoclonal antibody in under 90 minutes. That adds up to several grams per day.

The MAPS Preparative System 100 also offers these indispensable advantages:

- **Universal technique**, allowing separation of all antibody classes, including IgG, IgM and IgA!
- **Quantitative recovery** of antibody activity at high levels of purity.
- **Easy scale-up**, using small amounts of sample for preparative methods development.
- **Automated system** for easy operation and high reproducibility.
- **Non-pyrogenic system** for therapeutic applications requiring high purity antibody.

In addition, the System 100 comes complete with all materials needed for methods development.

We think it's the ideal system for the large scale purification of monoclonals. But find out for yourself. Call 800-4-BIORAD or contact:
