Science is indexed in the Reader’s Guide to Periodical Literature and in several specialized indexes.

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

Cover  Test flight in Earth’s atmosphere of balloon and gondola system
similar to two placed in the atmosphere of Venus in June 1985 by the VEGA
spacecraft. These were the first balloons to float in the atmosphere of another
planet. Gondola instruments measured in situ meteorological parameters; a
world-wide network of 20 ground-based antennas monitored the Venus winds by
means of radio signals transmitted by the balloons. See pages 1407–1425.
