Cholecystokinin (CCK)-containing neurons of the normal rat hippocampus illustrated by dark-field microscopy after immunocytochemical staining. These CCK-containing interneurons are a subset of γ-aminobutyric acid–containing interneurons that are resistant to epileptic seizure activity (magnification, ~400). See page 73. [Robert S. Sloviter, New York State Department of Health, West Haverstraw, NY 10993, and Columbia University, New York, NY 10032]
