Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.
cover. Cholecystokinin (CCK)-containing neurons of the normal rat hippocampus illustrated by dark-field microscopy after immunocytochemical staining. These CCK-containing interneurons are a subset of γ-aminobutyric acid–containing interneurons that are resistant to epileptic seizure activity (magnification, ~400). See page 73. [Robert S.
