## Articles

1336 The Urban Homeless: Estimating Composition and Size: P. H. ROSSI, J. D. WRIGHT, G. A. FISHER, G. WILLIS  
1342 Chromatography with Supercritical Fluids: M. L. LEE AND K. E. MARKIDES  
1348 The Regulation of Natural Anticoagulant Pathways: C. T. ESMON

## Research Articles

1353 The Relation Between Major Histocompatibility Complex (MHC) Restriction and the Capacity of Ia to Bind Immunogenic Peptides: S. BUUS, A. SETTE, S. M. COLON, C. MILES, H. M. GREY

- SCIENCE is published weekly on Friday, except the last week in December, and with an extra issue in February by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with *The Scientific Monthly* © Copyright © 1987 by the American Association for the Advancement of Science. The title SCIENCE is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$65. Domestic institutional subscription (51 issues): \$98. Foreign postage extra: Canada \$32, other (surface mail) \$27, air-surface via Amsterdam \$65. First class, airmail, school-year, and student rates on request. Single copies \$2.50 (\$3 by mail); back issues \$4 (\$4.50 by mail); Biotechnology issue, \$5.50 (\$6 by mail); classroom rates on request; Guide to Biotechnology Products and Instruments \$16 (\$17 by mail). Change of address: allow 6 weeks, giving old and new addresses and seven-digit account number. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075/83 \$1 + .10. Postmaster: Send Form 3579 to Science, 1333 H Street, NW, Washington, DC 20005. Science is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.
- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** A composite image of Markarian 348, the largest known galaxy. The cold, neutral hydrogen is shown in blue; the stars in the galaxy are shown in red. This is a Seyfert galaxy (one of the 5% of galaxies that have unusually active centers) with dimensions 310 by 390 kiloparsecs, or 13 times the size of our own galaxy. See page 1367. [S. M. Simkin *et al.*, Michigan State University, East Lansing, MI 48824]

## Reports

- 1367 **Markarian 348: A Tidally Disturbed Seyfert Galaxy:** S. M. SIMKIN, J. VAN GORKOM, J. HIBBARD, H.-J. SU
- 1370 **Mutants of Bovine Pancreatic Trypsin Inhibitor Lacking Cysteines 14 and 38 Can Fold Properly:** C. B. MARKS, H. NADERI, P. A. KOSEN, I. D. KUNTZ, S. ANDERSON
- 1373 **Superconductivity at 40 K in the Oxygen-Defect Perovskites  $\text{La}_{2-x}\text{Sr}_x\text{CuO}_{4-y}$ :** J. M. TARASCON, L. H. GREENE, W. R. MCKINNON, G. W. HULL, T. H. GEBALLE
- 1376 **Ribavirin Antagonizes the Effect of Azidothymidine on HIV Replication:** M. W. VOGT, K. L. HARTSHORN, P. A. FURMAN, T.-C. CHOU, J. A. FYFE, L. A. COLEMAN, C. CRUMPACKER, R. T. SCHOOLEY, M. S. HIRSCH
- 1379 **Region-Specific Expression of Two Mouse Homeo Box Genes:** M. F. UTSET, A. AWGULEWITSCH, F. H. RUDDLE, W. MCGINNIS
- 1383 **Regulation in Vitro of Metallothionein Gene Binding Factors:** C. SEGUIN AND D. H. HAMER
- 1387 **Megabase-Scale Mapping of the HLA Gene Complex by Pulsed Field Gel Electrophoresis:** S. K. LAWRANCE, C. L. SMITH, R. SRIVASTAVA, C. R. CANTOR, S. M. WEISSMAN
- 1390  **$\beta$  Amyloid Gene Duplication in Alzheimer's Disease and Karyotypically Normal Down Syndrome:** J.-M. DELABAR, D. GOLDGABER, Y. LAMOUR, A. NICOLE, J.-L. HURET, J. DE GROUCHY, P. BROWN, D. C. GAJDUSEK, P.-M. SINET
- 1392 **Transposition of Gram-Positive Transposon  $\text{Tn}916$  in *Acholeplasma laidlawii* and *Mycoplasma pulmonis*:** K. DYBVIG AND G. H. CASSELL
- 1394 **Human Retinoblastoma Susceptibility Gene: Cloning, Identification, and Sequence:** W.-H. LEE, R. BOOKSTEIN, F. HONG, L.-J. YOUNG, J.-Y. SHEW, E. Y.-H. P. LEE

## AAAS Meetings

- 1400 **R&D Policies, Budgets, and Economic Competitiveness: Preliminary Program** ■ Advance Registration Form

## Book Reviews

- 1408 **From Knowledge to Power and Science in the Provinces, reviewed by** R. S. TURNER ■ **Kadimakara, S. D. WEBB** ■ **Science Encounters the Indian, 1820-1880, W. N. FENTON** ■ **Organotransition Metal Chemistry, J. SCHWARTZ** ■ **Books Received**

## Products & Materials

**American Association for the Advancement of Science**  
*Science* serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

## Export Controls of High-Technology Goods

The impaired ability of the United States to compete internationally and even at home in high-technology products is a matter for searching examination. Our failures come from many sources. Recently, U.S. procedures for controls of exports of high-technology goods have been added to the list of causes. The National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine have rendered a public service by sponsoring a major study that has illuminated the need for changes in our system of controls.\*

Japan, France, and members of NATO have recognized that advanced technology confers military advantages over the Communist Bloc and have cooperated to limit transfer of technology there. However, the United States has imposed controls that go beyond those of its allies. In earlier times, we enjoyed a monopoly on high technology. But that status is gone. Japan and some members of the Common Market have been joined by Hong Kong, Singapore, South Korea, Taiwan, and others as exporters of microelectronics goods. Today, the United States purchases only 30 percent of the high-technology goods sold on the world market. If our manufacturers are to achieve economies of scale, they must distribute their products globally.

In spite of these developments, the United States behaves as if it still had the monopoly it enjoyed 20 years ago. We continue to assert "jurisdiction over goods and technology even outside the territorial United States when (i) the product or technology in question originated in or is to be or has been exported from the United States; (ii) the product or technology incorporates or uses products or technology of U.S. origin; (iii) the exporter is a U.S. national or is owned or controlled by U.S. interests." Thus when a U.S. subsidiary operating in West Germany wishes to export a high-technology item, permission must be sought from Washington.

The machinery for control of exports from the United States is slow and not very discriminating. The interval measured from when the application leaves the company to when the company receives an export license averages 54 days. In Japan, export licenses are processed in 2 to 3 days. Expeditious schedules prevail in other competing countries.

Delays and uncertainties handicap U.S. firms. Competitors can supply many of the high-technology items at lower prices or with better quality than can the U.S. firms and without delays. A survey conducted showed that many erstwhile customers of U.S. suppliers are turning to other sources.

An example from the report illustrates effects of U.S. export controls. In March 1983, a U.S. company sought a license to export a \$450,000 nuclear magnetic resonance spectrometer to a medical research institute in Eastern Europe. The application was not approved until November 1985. Although U.S. firms pioneered the development of NMR, German and Japanese companies now hold two-thirds of the world market for such instruments. During the review period in Washington, a German competitor sold several similar NMR systems to Communist Bloc customers. The NMR instruments do not appear on the U.S. control list, but the equipment was subject to licensing because it contained 32-bit array microprocessors and 30-megabyte Winchester disk drives.

To obtain information for the report, teams were sent to Europe and Asia. They heard many comments about deleterious effects of delays of processing export licenses and were reminded of the problem of the "\$2 microchip in the \$20,000 machine." When the U.S. chip was used, the entire product had to receive a U.S. re-export license. They also conversed with U.S. customs officers stationed abroad. One officer complained that on instructions from Washington, he spent most of his time "chasing" personal computers.

The United States is trying to control items produced by the millions in many countries. In 1979, legislation was enacted that called for elimination of controls on items that the Soviet Union either can make for itself or freely buy from uncontrolled sources. However, the will of Congress has been thwarted. Substantial progress has not been made in eliminating outdated controls.—PHILIP H. ABELSON
