Our Commitment: Innovative Solutions For Your Ultracentrifugation Needs

Rotor cutaway shows new g-Max™ System. Unlike other adapters, patented floating spacers keep bell-top Quick-Seal® tubes at bottom of rotor cavities. Sample can be run at full speed at a higher average g force for shorter pelleting and gradient runs.

Instruments—with the advanced L8M Series (80,000 rpm/602,000 g); the hard-working L7 Series (65,000 rpm/485,000 g); the revolutionary TL-100 Tabletop (100,000 rpm/541,000 g). All with vacuum-encased induction drives for outstanding efficiency and reliability. Also available: the Airfuge® air-driven ultracentrifuge (110,000 rpm/199,000 g) for rapid pelleting.

Rotors—more than 50 choices. Rotors fine-tuned to Beckman drive systems and enhanced by computer-aided design and an ongoing materials development program. Some recent Beckman firsts: vertical tube rotors with 1.7 g/mL density ratings so plasmid preps can be run without speed reductions; TL-100 rotors with short pathlengths for isopycnic separations in one-fifth the usual time.

Tubes and Bottles—more than 120 versions in six materials. Another Beckman innovation: capless Quick-Seal® tubes that eliminate time-consuming preparation steps. And now our new g-Max™ System extends their use to biocontainment in swinging bucket rotors and to short-pathlength runs in standard size rotors.

Accessories—take your choice. From something as simple as a new hand-held tube sealer to something as sophisticated as the SpinPro™ Expert System that helps you optimize runs and more.

All from one source. Beckman service, too!

Now you can purchase famous NARISHIGE products directly from NARISHIGE in the USA. We are the exclusive USA source for NARISHIGE CO., JAPAN. NARISHIGE USA now offers you immediate delivery, prompt reliable service, and exceptional values on NARISHIGE instruments.

Our products are the newest, most sophisticated instruments to come from this world renowned manufacturer; including new:

- Microdrives
- Micromanipulators
- Micropipette Pullers
- Microgrinders
- Microforges
- Microinjeters. All available with a One-Year Warranty and local service.

All NARISHIGE USA instruments are offered through a select group of local dealers, who will be happy to demonstrate our products to you.

For more information or the name of your local dealer call or write:

NARISHIGE USA, INC.
One Plaza Road, Greenvale, New York 11548
(516) 621-4588

**How to take command of your UV-Vis Assays**

1. **RECALL METHOD**
   - If your analytical work involves the determination of:
     - purity of samples
     - perturbation and dilution effects
     - concentration of single or multicomponents
     - decomposition studies
     - comparison with reference materials or other assays requiring advanced scanning capabilities, take command with the Varian DMS 200 UV-Vis Spectrophotometer. Combine its advanced calculator functions with its powerful COMMAND function and automate spectral data calculations. Calculated results are printed online, along with selected spectral data.

2. **START**
   - IBM PC/XT software enhances DMS 200 capabilities by extending method storage, storing spectral data and allowing application of user-developed spectral manipulations.

---

**DETERMINATION OF TWO COMPONENTS IN A MIXTURE**

Now in a single source—the latest information on the basic science, instrumentation and applications of lasers in biology and medicine

LASERS IN THE LIFE SCIENCES

Editor-in-Chief: Ashley J. Welch, Biomedical Engineering Program, University of Texas, Austin, Texas 78712, USA

Editors
Franz Hillenkamp, Institut für Biophysik der J.W. Goethe Universität, FRG
V.S. Letokhov, Institute of Spectroscopy, USSR Academy of Sciences, USSR
Jai Nan Qin, Shanghai Second Medical College, People's Republic of China
David Sliney, US Army Environmental Hygiene Agency, USA
Yoshitiro Hayata, Tokyo Medical College Hospital, Japan
Ehud Ben-hur, Nuclear Research Center-Necher, Israel

Lasers in the Life Sciences is intended to bridge the gap between the physical sciences such as physics, chemistry, and engineering and the medical and biological sciences. The journal publishes original theoretical and applied papers as well as overviews of basic science associated with the applications of lasers in biology and medicine. It provides a single publication for all basic science, instrumentation and applications articles.

Lasers in the Life Sciences provides up-to-date, current communications for:
• physicians and surgeons interested in new clinical applications of lasers or understanding interactions of laser light with tissue
• biologists and biochemists who use lasers to create micro lesions in cells or to activate photosensitive agents in larger volumes of tissue
• physicists and biomedical engineers interested in the instrumentation and application of lasers in the life sciences

Lasers in the Life Sciences places particular emphasis on:
• photobiology
• photochemical, thermal and mechanical processes
• optics, fiber optics and optical properties of tissue
• laser instrumentation and diagnostic devices
• applications of lasers in biology and medicine

Recent Papers of Interest . . .
• Electron Excitation Energy Distribution in the Photosynthetic Pigment Apparatus of Green Plants, by Leonid B. Rubin, and Vladimir Z. Paschenko
• Pulsed Neodymium-YAG Laser Effects on Normal and Atheromatous Aorta in Vitro, by F.W. Cross, T.N. Mills, and S.G. Bown
• Two-Step Photoactivation of Porphyrins with Nanosecond Red Pulses, by A. Andreoni, R. Cubeddu, O. Svelto, G. Cantli, L. Ricci, and V. Smilgulavitchious
• Thermal Conductivity and Diffusivity of Arterial Wall and Atherosclerotic Plaque, by Jonathan W. Valvano and Balakumar Chitsabesan
• Mechanism of Laser-Induced Fragmentation of Urinary and Biliary Calculi, by Norman S. Nishio, Peter Teng, Thomas F. Deutsch and R. Rox Anderson

An advanced tool for cell electroporation

Bio-Rad's new Gene Pulser™ Transfection Apparatus

Bio-Rad's Gene Pulser apparatus is a highly efficient means of electroporating mammalian, plant, and bacterial cells for transfection of DNA. The heart of the apparatus is a microprocessor-controlled pulse generator. Its unique features, well conceived accessories, and economical price place the Gene Pulser apparatus in a class by itself. Here's why:

- **High voltage, high current pulses.** Delivers continuously variable amplitudes from 50 to 2500 volts with exponential decay — and uses solid state circuitry to handle extremely high currents. This means you can electroporate cells in high conductivity media such as saline, or in low conductivity media such as sucrose.

- **Variable capacitance settings.** Four selectable capacitance settings provide the flexibility to vary the pulse time constant (T) for optimal transfection. You can generate pulses with time constants from 10 μsec up to 25 msec.

- **Capacitance extender for longer pulses.** Capacitance extender modules with 4 additional capacitance settings are available for electroporation of plant protoplasts and other cells requiring pulses with longer time constants — up to 1 second. Let us know your application.

- **Automatic measurements, digital readouts.** The Gene Pulser apparatus automatically measures and displays all key parameters, such as the actual voltage and the time constant of the delivered pulse. This allows close monitoring of the electroporation process.

But that's not all. Our sterile, disposable cuvettes with protective caps fit inside a specially designed Gene Pulser chamber. There's no danger of cross-contamination, and the operator is protected at all times.

Oh, the price? Very economical. Find out more. Contact Bio-Rad.

When it comes to research, don’t fight your way through the information maze.

There was a time when you could buy life insurance and know exactly what your benefits would be down the line. It’s not so easy anymore. Today, insurance plans feature complicated investment devices tied to fluctuating interest rates. And while the minimum and maximum amounts payable are fixed, your beneficiary might get less than you planned for.

Simple isn’t always better, but many insurance experts recommend you look at Term Life Insurance. It pays what it promises...no fancy investment footwork...right up to the termination age. Which is why the AAAS endorses its own Term Life Insurance Plan—it’s the purest and most inexpensive kind of life insurance. Each AAAS member can apply for up to $240,000 of coverage with generous protection for the family, too.

Interested? Simply contact the Administrator, AAAS Group Insurance Program, 1255 23rd Street, N.W., Suite 300, Washington, D.C. 20037, or call Toll-Free 800/424-9883 (in Washington, D.C. call 202/296-8030). They will be pleased to answer any questions you may have about this valuable member benefit.

If finding the right information on the latest patents, products and markets in biotechnology seems confusing, or if it takes too much valuable time, then you should know about DIALOG.

Now you can quickly find the right information in databases such as CA SEARCH, with instant access to millions of articles indexed by Chemical Abstracts Service.

Or in SCISEARCH, offering a multidisciplinary index to the literature of science and technology. Or in BIOSIS PREVIEWS, providing worldwide coverage of research in life sciences.

And in EXCERPTA MEDICA, a leading resource for biomedical research.

In fact, DIALOG saves valuable research time by giving you instant access to over 275 databases with information on literally millions of products and much more. So you’ll spend less time in the library and more time doing what you do best.

Your company may already be using DIALOG. Check to see. To get acquainted, DIALOG offers $100 worth of free time to first-time users. Just call 800-3-DIALOG. Or write DIALOG, 3460 Hillview Avenue, Palo Alto, CA 94304.
The new frontiers in biology today are the frontiers of biotechnology tomorrow……..

BIOTECHNOLOGY: The Renewable Frontier

Edited by
Daniel E. Koshland, Jr.
Editor, Science

Discoveries in the modern biology laboratory are of great practical importance in industry today, as they have been in medicine for many years. This volume clearly illustrates the extraordinary cross-disciplinary aspects of modern biology and its tremendous impact on the future. Like its 1984 predecessor, this collection presents the latest and most important topics at the forefront of biological research. Compiled from papers in Science, 1985.

Contents

I. New Techniques
   In Vitro Mutagenesis
   Novel Genomes of Large DNA Viruses
   Heterologous Protein Secretion from Yeast
   Genetic Linkage Map of the Human X Chromosome
   Protein Insertion into Across Membranes

II. Immunology
   Transfectionos to Novel Chimeric Antibodies
   Histocompatibility Antigens on Murine Tumors
   Factors in Protein Antigenic Structure

III. Developmental Biology and Cancer
   Spatially Regulated Expression of Homeotic Genes in Drosophila
   Plasticity of the Differentiated State
   Oncogenes in the Cytoplasm & Nucleus
   Granulocyte-Macrophage Colony-Stimulating Factors
   X-Ray Structure of Displatin with DNA
   Immunoglobulin Heavy-Chain Enhancer: Tissue-Specific Factors

IV. Hormones and Metabolism
   Atrial Natriuretic Factor
   The LDL Receptor Gene
   Human von Willebrand Factor

V. Biotechnology
   Biotechnology & Food
   Drug Biotechnology: The Japanese Challenge

VI. Virology
   Nucleotide Sequence of Yellow Fever Virus
   Three-Dimensional Structure of Poliovirus

VII. Plant Sciences
   Arabidopsis thaliana & Molecular Genetics
   Safety & Genetic Engineering in Agriculture

VIII. Behavior and Sensory Phenomena
   The Cellular Basis of Hearing
   Insect Colony Sociogenesis
   Neurotrophic Factors

1986; 400 pp., comprehensive index, 125 illustrations and tables
Hardcover $29.95; AAAS members $23.95 ISBN 0-87168-314-7
Softcover $17.95; AAAS members $14.35 ISBN 0-07168-283-4

VISA, MasterCard, and Choice accepted; include account number, expiration date, and signature. Order from American Association for the Advancement of Science, Marketing, Dept. F, 1333 H Street, NW, Washington, DC 20005. Please add $1.50 postage and handling per order. Allow 4–6 weeks for delivery.
Now a surface modification one thousand times thinner than this page can revolutionize the binding of protein to polymer

Introducing CO-BIND™

New CO-BIND™ technology modifies a polymer surface, chemically activating it to increase protein binding capacity by up to five times over other technologies.

Test systems modified with CO-BIND™ offer CV's significantly lower and more uniform than those employing other binding technologies. Improved uniformity and sensitivity of ELISA and other diagnostic methodologies reduce reagent usage, providing significant cost savings. And because surface modification is limited to a maximum depth of a few molecular layers, the base polymer retains complete optical clarity for uncompromised spectrophotometry.

CO-BIND™ activates almost any polymer article, including microtiter trays, test tubes, Petri dishes, strip wells, plastic strips and beads—the possibilities are boundless.

Find out how CO-BIND™ can revolutionize your immunodiagnostic research and product development. Call 1-800-722-MEMB, toll free, (in New Jersey call 201-621-7010), or write Micro Membranes, Inc. today.
The tools of Mendel's study were the colors, textures and shapes of plants, such as this preserved pea, *Pisum sativum*, pressed in 1853 at the Botanical Garden of the University of Uppsala, Sweden.

A facsimile from one of Mendel's own handwritten manuscripts, in which he sets forth the Mendelian laws.

Seed proteins of 20 different pea variants (*Pisum sativum*), focused on Immobiline DryPlate pH 4—7. The gel was rehydrated with 8M urea, 15% glycerol and 10 mM DDT. (A. Görg et al, in Electrophoresis '86, ed. M.J. Dunn; VCH Verlagsgesellschaft mbH, Weinheim F.R.G. 1986, 435—449.)
Imagine what Mendel could have done with the gel techniques of today!

The most creative years of Gregor Mendel's lifetime were the 14 he spent cross-fertilizing and hybridizing peas, and beans in an Austrian monastery garden. Yet, while Mendel made monumental discoveries there, he also tasted defeat. Some scholars believe, in fact, that the impossibility of verifying his early results with hawkweeds is what finally discouraged him from continuing his pioneering work.

Think what Mendel could have done with today's gel techniques!

Whereas Mendel was limited to studying the colors, textures and shapes of plants, modern genetics uses high resolution electrofocusing advantageously to study minute variations on the protein level.

From genetics, electrofocusing has spread now to agriculture and the cereal trade. In agriculture it is used in the breeding and testing of cultivars, and in the cereal trade to check the quality of seed lots purchased for milling, baking, malting and brewing.

Immobiline DryPlates, the most recent addition to LKB's family of electrofocusing gels, combine high resolution and reproducibility with the convenience of a dried-down, precast gel. Carefully washed before packaging, to ensure that no unpolymerized monomers remain, they are so safe that you can handle them barehanded. Any solution can be used for rehydration — and any additive your experiment requires can be included.

Available in five pH ranges, Immobiline DryPlates are ideal for routine analyses of proteins and for the first dimension in 2-D work.

LKB pioneered the electrofocusing technique too late for Mendel, but in time to enrich the creative years of your own research. For complete information about Immobiline DryPlates and other outstanding electrofocusing gels, please contact your local LKB representative.
SAVANT CENTRIFUGES.
HIGH SPEED, HIGHER CAPACITY.

Savant's compact, table-top centrifuges give you maximum capacity and greatest versatility.

- Holds up to 48 tubes.
- Quietest operation available.
- Compact, takes 1 square foot of bench space.
- Versatile—handles test tubes from .4 ml to 15 ml.
- Variable speeds: Force to 12,800 x G.
- Built in cooling coil.

For complete details, contact:
SAVANT Instruments, Inc.
110-103 Bi-County Blvd.
Farmingdale, NY 11735
(516) 249-4600
(800) 634-8886

SAVANT
For Sample Preparation.
The following posters of Science covers are available:

- 9 February 1979, Locomotive in China;
- 27 July 1979, Lightning over St. Louis;
- 29 July 1983, Cheetah and cub;
- 2 December 1983, Snowshoe hare;
- 23 December 1983, Cathedral window/DNA molecule;
- 26 September 1986, Neurons in motor cortex;
- 28 November 1986, Byrd Glacier, Antarctica

Combination of space covers in scroll format: 1 June 1979, 23 November 1979, 10 April 1981.

Price is $5.50 each (prepaid)
