- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER The backbone structure of human c-H-ras oncogene protein. The flow of the backbone is represented by a continuous ribbon using a program BSRIIBON. The guanosine diphosphate molecule is shown as a dot-surface using the program PSFRODO. See page 888. [A.
