A Persistent Untranslated Sequence Within Bacteriophage T4 DNA Topoisomerase Gene 60: W. M. Huang, S-Z. Ao, S. Casjens, R. Orlandi, R. Zeikus, R. Weiss, D. Winge, M. Fang
A scanning tunneling microscope image of a platinum-carbon replica of the ripple phase of dimyristoylphosphatidylcholine bilayers in water. The replicated surface can be best seen by turning the image 90° counterclockwise. Large ripples are spaced approximately 12 nanometers apart and are about 4.5 nanometers in amplitude. The image was taken by using a NanoScope II digital STM at 1 nanoampere and 20 millivolts bias. See page 1013. [J. Zasadzinski et al., University of California, Santa Barbara, CA 93106]
