- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Sockeye salmon, among the most economically important fish species in the world, migrating from their ocean feeding grounds to spawn and die in freshwater (Adams River, British Columbia). Relative aquatic productivity of oceans and freshwaters has probably played an important role in the evolution of such spectacular movements by fishes. See page 1291.
