■ SCIENCE is published weekly on Friday, except the last week in December, and with an extra issue in February by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with *The Scientific Monthly*® Copyright © 1988 by the American Association for the Advancement of Science. The title SCIENCE is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$65. Domestic institutional subscription (51 issues): \$98. Foreign postage extra: Canada \$32, other (surface mail) \$27, air-surface via Amsterdam \$65. First class, airmail, school-year, and student rates on request. Single copies \$3.00 (\$3.50 by mail); back issues \$4.50 (\$5.00 by mail); Biotechnology issue, \$5.50 (\$6 by mail); classroom rates on request; Guide to Biotechnology Products and Instruments \$16 (\$17 by mail). **Change of address:** allow 6 weeks, giving old and new addresses and seven-digit account number. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075/83 \$1 + .10. **Postmaster:** Send Form 3579 to Science, 1333 H Street, NW, Washington, DC 20005. Science is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.

■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Two-dimensional carbon-carbon double-quantum correlated nuclear magnetic resonance spectrum of a carbon-13 labeled protein, oxidized *Anabaena* 7120 ferredoxin (molecular weight 11,000). The lines represent the tracing of signals from the carbon chains of individual amino acid residues obtained with the "MADNMR" graphics program. See page 908. [B. H. Oh, W. M. Westler, P. Darba, and J. L. Markley, University of Wisconsin, Madison, WI 53706]

Reports

- 906 A Model of Solar Luminosity Modulation by Magnetic Activity Between 1954 and 1984: J. LEAN AND P. FOUKAL
- 908 Protein Carbon-13 Spin Systems by a Single Two-Dimensional Nuclear Magnetic Resonance Experiment: B. H. OH, W. M. WESTLER, P. DARBA, J. L. MARKLEY
- 911 Calpain II Involvement in Mitosis: J. E. SCHOLLMEYER
- 913 Identification and Characterization of a Neuron-Specific Nuclear Antigen in *Drosophila*: E. BIER, L. ACKERMAN, S. BARBEL, L. JAN, Y. N. JAN
- 916 HTLV-II Transactivation Is Regulated by the Overlapping *tax/rex* Nonstructural Genes: J. D. ROSENBLATT, A. J. CANN, D. J. SLAMON, I. S. SMALBERG, N. P. SHAH, J. FUJII, W. WACHSMAN, I. S. Y. CHEN
- 919 Reduction of a Naturally Occurring Motoneuron Death in Vivo by a Target-Derived Neurotrophic Factor: R. W. OPPENHEIM, L. J. HAVERKAMP, D. PREVETTE, J. L. MCMANAMAN, S. H. APPEL
- 922 Theoretical Studies of DNA During Gel Electrophoresis: J. M. DEUTSCH
- 924 Iron-Responsive Elements: Regulatory RNA Sequences That Control mRNA Levels and Translation: J. L. CASEY, M. W. HENTZE, D. M. KOELLER, S. W. CAUGHMAN, T. A. ROUAULT, R. D. KLAUSNER, J. B. HARFORD

Book Reviews

American Association for the Advancement of Science Science serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

Competitiveness: A Long-Enduring Problem

A gradual decay of our position of world leadership in manufacturing technology was apparent more than two decades ago when our annual rate of increase of labor productivity fell far behind those of Japan and West Germany. By 1980 these two countries were already competitive with the United States in many areas of manufacturing. When a team of Xerox engineers visited Japan in 1979, they discovered that competitors were manufacturing copiers at half of Xerox's production costs and with parts whose freedom from defects was better by a factor of 30.

Thus the United States was already in a weak position when the Federal Reserve initiated tight money policies to fight inflation. By early 1985 the value of the dollar had doubled against the deutsche mark. There was also a major increase against the yen. Between 1979 and 1985, unit labor costs in manufacturing in dollars increased 24 percent in the United States while decreasing 14 percent in Japan and 27 percent in West Germany. Between 1980 and 1985, U.S. exports of manufactures declined 19 percent, while those of Japan, Europe, and less developed countries increased 42 percent, 22 percent, and 88 percent, respectively. Simultaneously, U.S. imports increased, with a consequent manufactures trade deficit.

Since February 1985, the dollar has declined against the deutsche mark and the yen. Its value relative to those currencies in early 1988 was somewhat less than it was in 1980. However, the trade balance that existed in 1980 has not been restored. Among the reasons cited are the emergence of newly industrialized nations as competitors. In many items their technology and labor productivity is comparable to that of the United States, while wage rates are 10 to 20 percent of those here. Also, in 1980 the Latin American countries were borrowing in the United States and importing from it. Now they are trying to expand exports chiefly in U.S. markets to pay interest on their debts. A further drop in the dollar is widely considered to be inevitable, but that may not be enough.

There are indications that necessity awakened some companies to the desirability of learning lessons from the Japanese. For example, in 1981 Xerox announced a people-oriented strategy that included emphasis on quality, employee involvement, and decentralization of decision-making. By 1986 Xerox had achieved a great improvement in quality and had cut costs by a factor of 2. Using a similar approach and the just-in-time technique for parts, Harley-Davidson achieved a 45 percent increase in productivity, a reduction in inventory, lower absenteeism, and a 50 percent increase in market share.

Ralph Gomory, a senior vice president of IBM has written*

Our most effective foreign competition to date has been characterized by

- Tight ties between manufacturing and development;
- An emphasis on quality;
- The rapid introduction of incremental improvements . . . of a preexisting product; and
- A tremendous effort, by those actually in the product cycle, to be educated on the relevant technologies, on the competition's products, and on what is going on in the world.

IBM has implemented those principles and has managed to be among the leaders in a series of cyclic incremental improvements that include going from memories of one bit per chip to a million bits per chip in 20 years. That kind of dramatic improvement is not potentially available in many industries. However, if the competitiveness of the United States is to increase in the near and intermediate term, there must be a never-ending search for incremental improvements in the procedures for producing existing products.

The federal government cannot successfully order industry to be more competitive. On the other hand, the government has long operated in a confrontational mode, with spotty exceptions. As the report of the National Academy of Engineering† has conveyed: “. . . government policies [should] be constantly reviewed to ensure that they not only achieve the desired social, political, and national security purposes, but also support—or at least not impair—our international competitiveness.”—PHILIP H. ABELSON
