1453 *Drosophila melanogaster* as an Experimental Organism: G. M. RUBIN
1460 Plants: Novel Developmental Processes: R. B. GOLDBERG
1468 Transgenic Animals: R. JAENISCH
1475 Primates: F. A. KING, C. J. YARBROUGH, D. C. ANDERSON, T. P. GORDON,
K. G. GOULD

- SCIENCE is published weekly on Friday, except the last week in December, and with an extra issue in February by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with *The Scientific Monthly* © Copyright © 1988 by the American Association for the Advancement of Science. The title SCIENCE is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$70. Domestic institutional subscription (51 issues): \$110. Foreign postage extra: Canada \$32, other (surface mail) \$32, air-surface via Amsterdam \$85. First class, airmail, school-year, and student rates on request. Single copies \$3.00 (\$3.50 by mail); back issues \$4.50 (\$5.00 by mail); Biotechnology issue, \$5.50 (\$6 by mail); classroom rates on request; Guide to Biotechnology Products and Instruments \$16 (\$17 by mail). Change of address: allow 6 weeks, giving old and new addresses and seven-digit account number. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075/83 \$1 + .10. Postmaster: Send Form 3579 to Science, 1333 H Street, NW, Washington, DC 20005. Science is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.
- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER No single organism has a monopoly in science. This issue of *Science* focuses on the reasons why scientists choose to do their investigations in particular biological systems. See page 1427. [Cover design by Sharon Wolfgang, Washington, DC]

Reports

- 1483 The Human as an Experimental System in Molecular Genetics: R. WHITE AND C. T. CASKEY
- 1515 Disruption of the Nitrogen Cycle in Acidified Lakes: J. W. M. RUDD, C. A. KELLY, D. W. SCHINDLER, M. A. TURNER
- 1517 North Carolina Climate Changes Reconstructed from Tree Rings: A.D. 372 to 1985: D. W. STAHL, M. K. CLEAVELAND, J. G. HEHR
- 1520 DNA and RNA Sequence Determination Based on Phosphorothioate Chemistry: G. GISH AND F. ECKSTEIN
- 1522 Characterization of a Noncytopathic HIV-2 Strain with Unusual Effects on CD4 Expression: L. A. EVANS, J. MOREAU, K. ODEHOURI, H. LEGG, A. BARBOZA, C. CHENG-MAYER, J. A. LEVY
- 1525 West African HIV-2-Related Human Retrovirus with Attenuated Cytopathicity: L. I. KONG, S.-W. LEE, J. C. KAPPES, J. S. PARKIN, D. DECKER, J. A. HOXIE, B. H. HAHN, G. M. SHAW
- 1529 Two Classes of PDGF Receptor Recognize Different Isoforms of PDGF: C. E. HART, J. W. FORSTROM, J. D. KELLY, R. A. SEIFERT, R. A. SMITH, R. ROSS, M. J. MURRAY, D. F. BOWEN-POPE
- 1532 A Common PDGF Receptor Is Activated by Homodimeric A and B Forms of PDGF: J. A. ESCOBEDO, S. NAVANKASATUSSAS, L. S. COUSENS, S. R. COUGHLIN, G. I. BELL, L. T. WILLIAMS
- 1534 Chloroplast Transformation in *Chlamydomonas* with High Velocity Microprojectiles: J. E. BOYNTON, N. W. GILLHAM, E. H. HARRIS, J. P. HOSLER, A. M. JOHNSON, A. R. JONES, B. L. RANDOLPH-ANDERSON *et al.*
- 1538 Mitochondrial Transformation in Yeast by Bombardment with Microprojectiles: S. A. JOHNSTON, P. Q. ANZIANO, K. SHARK, J. C. SANFORD, R. A. BUTOW
- 1541 Extensive Junctional Diversity of Rearranged Human T Cell Receptor δ Genes: S. HATA, K. SATYANARAYANA, P. DEVLIN, H. BAND, J. MCLEAN, J. L. STROMINGER, M. B. BRENNER, M. S. KRANGEL
- 1544 Inhibition of Cellular Proliferation by Antisense Oligodeoxynucleotides to PCNA Cyclin: D. JASKULSKI, J. KIM DERIEL, W. E. MERCER, B. CALABRETTA, R. BASERGA
- 1546 Cachectin/TNF and IL-1 Induced by Glucose-Modified Proteins: Role in Normal Tissue Remodeling: H. VLASSARA, M. BROWNLEE, K. R. MANOGUE, C. A. DINARELLO, A. PASAGIAN

Book Reviews

- 1552 Science and Technology Advice to the President, Congress, and Judiciary, reviewed by H. F. YORK ■ How Superstition Won and Science Lost, N. HARRIS ■ Books Received

Products & Materials

- 1554 Restriction Mapping Software ■ Precast Mini Gels ■ Action Potential Discriminator ■ Refrigerated Centrifuge ■ DNA Polymerase α -Primase ■ Water Purification System ■ Waterproof pH Meter ■ Literature

American Association for the Advancement of Science
Science serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

Publisher: Alvin W. Trivelpiece

Editor: Daniel E. Koshland, Jr.

Deputy Editors: Philip H. Abelson (*Engineering and Applied Sciences*); John I. Brauman (*Physical Sciences*)

EDITORIAL STAFF

Managing Editor: Patricia A. Morgan

Assistant Managing Editor: Nancy J. Hartnagel

Senior Editors: Eleanore Butz, Ruth Kulstad

Associate Editors: Martha Coleman, R. Brooks Hanson, Barbara Jasny, Katrina L. Kelner, Edith Meyers, Linda J. Miller, Phillip D. Szuroni, David F. Voss

Letters Editor: Christine Gilbert

Book Reviews: Katherine Livingston, *editor*; Deborah F. Washburn

This Week in Science: Ruth Levy Guyer

Contributing Editor: Lawrence I. Grossman

Chief Production Editor: Ellen E. Murphy

Editing Department: Lois Schmitt, *head*; Mary McDaniel, Patricia L. Moe, Barbara E. Patterson

Copy Desk: Joi S. Granger, Beverly Shields, Anna Victoreen, Barbara Wittig

Production Manager: Karen Schools

Assistant Production Manager: James Landry

Graphics and Production: Holly Bishop, James J. Olivarri, Yolanda M. Rook

Covers Editor: Grayce Finger

Manuscript Systems Analyst: William Carter

NEWS STAFF

News Editor: Barbara J. Culliton

News and Comment: Colin Norman, *deputy editor*; William Booth, Gregory Byrne, Mark H. Crawford, Constance Holden, Eliot Marshall, Marjorie Sun, John Walsh

Research News: Roger Lewin, *deputy editor*; Deborah M. Barnes, Richard A. Kerr, Jean L. Marx, Leslie Roberts, M. Mitchell Waldrop

European Correspondent: David Dickson

BUSINESS STAFF

Business Staff Manager: Deborah Rivera-Wienhold

Classified Advertising Supervisor: Karen Morgenstern

Membership Recruitment: Gwendolyn Huddle

Member and Subscription Records: Ann Ragland

Guide to Biotechnology Products and Instruments: Shauna S. Roberts

ADVERTISING REPRESENTATIVES

Director: Earl J. Scherago

Traffic Manager: Donna Rivera

Traffic Manager (Recruitment): Gwen Canter

Advertising Sales Manager: Richard L. Charles

Employment Sales Manager: Edward C. Keller

Marketing Manager: Herbert L. Burkland

Sales: New York, NY 10036: J. Kevin Henebery, 1515 Broadway (212-730-1050); Scotch Plains, NJ 07076: C. Richard Callis, 12 Unami Lane (201-889-4873); Chicago, IL 60611: Jack Ryan, Room 2107, 919 N. Michigan Ave. (312-337-4973); San Jose, CA 95112: Bob Brindley, 310 S. 16 St. (408-998-4690); Dorset, VT 05251: Fred W. Dieffenbach, Kent Hill Rd. Information for contributors appears on page XI of the 25 March 1988 issue. Editorial correspondence, including requests for permission to reprint and reprint orders, should be sent to 1333 H Street, NW, Washington, DC 20005. Telephone: 202-326-6500.

Advertising correspondence should be sent to Tenth Floor, 1515 Broadway, NY 10036. Telephone 212-730-1050 or WU Telex 968082 SCHERAGO.

Biological Systems

The proper study of mankind may well be the fly, the frog, the bacterium, and the nematode, as well as the rat, the ape, and mankind itself, because studies of specific biological systems have taken a central role in modern biology. This has not always been true; originally biology emphasized taxonomy and the diversity of species. As the number of identified species increased, the similarities among differing species were noted, and more in-depth studies of individual species were appropriate. Gradually certain systems became preferred models for biological systems in general, a tendency which has been accentuated as molecular approaches have become the lingua franca of modern biology.

The concept of selecting a common system for in-depth study emerged slowly. In some disciplines it was once considered poor etiquette to work on a colleague's system: if he or she used the toad, you used the frog. That practice led to great inefficiency, because the details of manipulating any system—how to grow the organism, the chemistry of the cell wall, mating habits—had to be worked out over and over again. Therefore, workers focused on a few systems such as *Escherichia coli*, *Drosophila melanogaster*, or inbred mice, in which many of the important housekeeping procedures had been elucidated. In this issue of *Science* some of the major experimental systems are described in terms of the state of the art, potential advantages, and possible disadvantages.

Of the systems outlined here, retroviruses, bacteria, and yeast are the simplest, most manipulatable, and most intensively delineated. Retroviruses (Varmus) are revealing per se as well as being useful tools for gene delivery into other systems. Magasanik, while pointing out the past triumphs of using bacteria to understand regulation, metabolism, and genetics, indicates there is much gold still to be mined and gives examples. Yeasts are essentially on a par with bacteria in ease of recombinant DNA manipulation, but—as indicated by Botstein and Fink—it is their complexity, as in cell compartments, cell cycle regulation, and protein sorting, that makes them valuable as eukaryotic models.

Higher on the evolutionary ladder, the nematode, the fly, and the frog have the advantage of complexity beyond the single cell, but represent far simpler species than mammals. Every cell can be identified in the nematode (Kenyon), which makes it ideal for cell lineage studies. Studies in *Drosophila* (Rubin) can now use recombinant DNA, genetic selection, and a history of neurologic and developmental information. The frog (Dawid and Sargent) is a historical system for studying development; the frog oocyte has become a major system for expression of foreign RNA and DNA. Plants have a special role (Goldberg) because of the importance of botanical species and because of their novel developmental processes, among them the capacity for mature cells to regenerate.

Eventually, one must have mammalian studies, and those of the rat, the ape, and the human are three of the most important. Transgenic animals (Jaenisch), particularly transgenic mice, have become major tools for studying the effects of individual genes on the whole animal and permit the generation of precise animal models for human genetic diseases. For understanding of many human responses, primates (King *et al.*) are clearly the best source, but dealing with these large and sophisticated animals makes them a court of last resort; it is always necessary to consider whether alternative systems are available.

Then, of course, there is mankind. Human beings are capable of describing emotional states as well as physical conditions such as pain, they can often provide generations of family history, and they can reveal multitudinous clinical data (White and Caskey). Defensive medicine may thus be an unexpected boon to research. In their Perspective, Sladek and Shoulson present views on the need for caution in attempting to realize the great potential of transplantation of fetal material for human therapy.

The assembly of a *Science* special issue involves the efforts of many, but one editor traditionally takes the lead. In this case, Barbara Jasny came close to editorial heroism in surmounting difficulties that arose in production; she played vital roles in the selection of topics, special assistance to authors, and the editing of final manuscripts.

It is our intention to add some of the systems that have been missed because of the limitations of space in this issue to a final volume on biological systems. We hope, however, that this initial set of articles will be useful to all our readers, from graduate students to research directors to general readers who seek a more thorough understanding of specialty systems.—DANIEL E. KOSHLAND, JR.
