Separation of plasmid and chromosomal DNA

Run conditions:
CsCl-ethidium bromide gradient, homogeneous starting density 1.55 g/mL.
VTi 65.2 vertical tube rotor spun at 65,000 rpm in an L8M or L7 Ultracentrifuge.
Temperature 20°C. Sixteen 5.1-mL Quick-Seal polyallomer tubes.

This full-speed run can only be achieved in a Beckman VTI 65.2 rotor.

REACH FOR A COOL ONE!

Introducing STRATACOOLER II™
Your Portable -20° Benchtop Freezer

While at your lab bench, or anywhere your research may lead you, the Stratacooler II is designed to maintain subzero temperatures. Within your -20° C freezer the Stratacooler II insulates your enzymes from periodic temperature increases due to open freezer doors, frost-free cycles, or power loss. Your Stratacooler II will maintain your enzymes at -15° C for up to two hours at your work area.

The Stratacooler II has all of the features of the original Stratacooler with several enhancements. The new shape facilitates transportation and handling of the cooler. Stratacooler II is also designed for efficient stacking and easy access using racks available from Stratagene.

The Stratacooler II accommodates 32 standard microcentrifuge style tubes. Each unit is thoroughly tested and guaranteed to perform to specifications.

Please call for a catalog and details: 1-800-548-1113

In Europe:
Stratagene GmbH

Téléfax: (06221) 40 06 39
For orders outside the USA or Germany please contact Stratagene for the distributor nearest you.
The first computerized identification system for even the toughest microbes!

The automated Microbial Identification System. Now available from MIDI.

The Microbial Identification System from MIDI combines the proven accuracy of fatty acid profiling with the power and convenience of tabletop computing, providing a simple, yet precise, technique for identification of problem microbes.

**Aerobe and Anaerobe Libraries**

The unique fatty acid composition of your unknown is rapidly compared, through use of a pattern recognition program, to databases containing more than 40,000 analyses. The resulting report indicates genus, species, and often subspecies identification.

Mycobacterium, Legionella, many coryneforms, and a 35°C blood-agar have been added to the aerobe library. The system also offers an expanded plate-grown anaerobic bacteria library complemented by a new broth-grown database developed at the VPI Anaerobe Laboratory.

**Reliable and Economical**

A minimum use of consumables keeps your cost per identification lower than most biochemical tests, and proven Hewlett-Packard hardware provides the reliability required to keep your lab running around the clock.

To learn more about the innovative Microbial Identification System from MIDI, just call the number below or return the reader reply card.

Introducing Promega's New TaqTrack™ Sequencing System:

The solution to sequencing difficult DNA templates.

- Sequence at 70°C to 95°C with thermostable Taq DNA polymerase
- Solve difficult template problems
  - GC rich regions
  - long hairpins
  - long poly(A) tails
- Sequence lambda dsDNA
- Observe consistent band intensity
- Actually read from 1-500 bases
- Avoid lengthy chemical methods

With capabilities like this, consider the advantages of using the TaqTrack System for routine sequencing!

Circle No. 137 on Readers' Service Card
Call 1-800-356-9526 for more information.

Autoradiograph showing the products of sequencing M13mp7 with the TaqTrack™ Sequencing System. The figures show the sequence of the multiple cloning site region, which contains a GC-rich, perfectly inverted repeat of 24 base pairs. A reaction temperature of 70°C simplifies polymerization through highly structured templates. The DNA polymerase isolated from Thermus aquaticus exhibits a consistent band intensity and a high degree of accuracy when used for sequencing. This thermostable enzyme lacks intrinsic exonuclease activity, which results in a low gel background. In addition, the analogue 7-deaza dGTP can be used to resolve gel artifacts associated with GC-rich regions, as shown.

the care to meet, to know, to understand

Ares-Serono Symposia is an independent foundation, created in 1971, to promote scientific research in all disciplines which contribute towards improving human health. This aim is pursued by means of congresses, courses, seminars and specialized studies.

Some of the international meetings scheduled for 1989 are:

Unexplained Infertility: Basic and Clinical Aspects
Rome, Italy/March 7-8
Scientific Organization: G. Benagiano (I), K.J. Catt (USA) and G. Spera (I)

Symposium on the Pathogenesis and Control of Viral Infections
Beijing, Republic of China/April 24-26
Scientific Organization: F. Audi (I), Z. Zonghan (PRC) and S. Guoxian (PRC)

8th Workshop on Development and Function of the Reproductive Organs
Toursaine, France/May 23-25
Scientific Organization: N. Josso (F)

1st International Congress on G.I.F.T.: from Basics to Clinics
Rapallo, Italy/June 8-10
Scientific Organization: R.H. Asch (USA) and L. De Cocco (I)

Membrane Technology in Clinical Pathology, Biochemistry and Pharmacology
L'Aquila, Italy/June 19-23
Scientific Organization: R. Verna (I), R.P. Blumenthal (USA), J.A. Hannover (USA) and R.P. Garay (F)

Cardiovascular and Neurological Function and Ovarian Secretions
Dubrovnik, Yugoslavia
Aug. 31-Sept. 1
Scientific Organization: F. Naftolin (USA)

Establishment of a Successful Human Pregnancy
Cambridge, U.K./September 21-23
Scientific Organization: R.G. Edwards (UK)

Developmental Endocrinology
Geneva, Switzerland/October 23-24
Scientific Organization: P.C. Sizonenko (CH) and M. Albert (CH)

Advanced Course in Molecular Pathology and Biotechnology
Rome, Italy/November 6-10
Scientific Organization: L. Frati (I)

INTRODUCING
Java
JANDEL VIDEO ANALYSIS SYSTEM

Automatic edge tracking (2x zoom)
Density along a strip
Automatic object counting
16k x 64k data worksheet
Intensity histogram
User defined transformations

Analyze and make measurements
From nearly any video image—with JAVA™—
Jandel’s new Video Analysis Software.

JAVA™ features a powerful assortment of image processing and measurement functions at a surprisingly reasonable cost. Prepare an image for study with contrast enhancement, histogram equalization, and user-defined convolutions. Determine densities at points, along lines, or from vertically averaged strips in seconds. JAVA’s automatic line and edge tracking allows strip-charts and perimeters of complex objects to be digitized without hand tracing. Automatic object or grain counting is standard.

Direct measurements to JAVA’s 64,000 row by 16,000 column worksheet. From there, use JAVA’s descriptive statistics, t-tests, screen plots, and powerful transforms. Standard ASCII data are easily transferred to LOTUS or other programs, including Jandel’s Sigma-Plot™.

JAVA™ accepts standard output from video cameras and VCRs (RS-170/NTSC composite video), and many pre-digitized images (e.g. CAT, MRI, ultrasound).

An IBM XT, AT or compatible, mouse and video digitizing board (Frame grabber) will put JAVA to work for you. As with all Jandel products, it comes with a money-back guarantee.

The new METTLER AT Analytical Balance was developed around a remarkable discovery: People only have two hands.

For years people with two hands have had to operate balances designed for three.
Introducing the METTLER AT. The first analytical balance that's simple to handle.
One hand is now free to open the draft shield from the opposite side. So you don't have to twist both arms to work on the same side. Or you can let the draft shields open and close automatically. Which leaves your hands free to move your samples instead of doors.
You have a choice of configuring the draft shield so you can put your sample on from the left, the right, or even from above.
The weighing pan is close to the edge of the weighing chamber. Which for the first time allows your hand to get close to the pan.
To find out more, call us. We'd be happy to give you a hand.

Mettler Instrument Corporation
Box 71, Hightstown, N.J. 08520

If you perform calculations, the answer is obvious.

MathCAD 2.0.

Just define your variables and enter your formulas anywhere on the screen. MathCAD formats your equations as they're typed. Instantly calculates the results. And displays them exactly as you're used to seeing them—in real math notation, as numbers, tables or graphs.

MathCAD is more than an equation solver. Like a scratchpad, it allows you to add text anywhere to support your work, and see and record every step. You can try an unlimited number of what-ifs. And print your entire calculation as an integrated document that anyone can understand.

Plus, MathCAD is loaded with powerful built-in features. In addition to the usual trigonometric and exponential functions, it includes built-in statistical functions, cubic splines, Fourier transforms, and more. It also handles complex numbers and unit conversions in a completely transparent way.

Yet, MathCAD is so easy to learn, you'll be using its full power an hour after you begin.

Requires IBM PC® or compatible, 512KB RAM, graphics card.

IBM PC® International Business Machines Corporation.

MathCAD® MathSoft, Inc.
Hang out after school.

You're a mile high, about 5000 feet from the ground, and swaying in a southerly breeze. And you're not a bit concerned. Because, even though you're new at this, you learned what to expect and how to deal with it before you took off. And the people around you made sure of it.

That's exactly what TIAA-CREF did for you before you retired. They explained things. Tax reform, investment choices, and other things that could affect your pension. Throughout the years they always answered your questions, and what's even better—they still do. Now, you can relax and enjoy the fact that the world is at your feet.

TIAA-CREF. Pension planning expertise for the education and research communities.

Ensuring the future for those who shape it.

Teachers Insurance and Annuity Association-College Retirement Equities Fund can help your dreams come to life. For more complete information, including charges and expenses, call 1 800 842-2733 for a prospectus. Read the prospectus carefully before you invest or send money.
Books from AAAS
Issues in Science and Technology

Scientists and Journalists: Reporting Science as News, Edited by Sharon M. Friedman, Sharon Dunwoody, and Carol L. Rogers.
The public is interested in science and depends largely on the mass media for the latest information. But how well do scientists and journalists communicate with each other and to the public? This book examines the links between scientists and journalists as seen through the eyes of both. 1986; 334 pp.; hardcover $24.95 ($19.95 for AAAS members); AAAS Publication #86-20.

Science and Creation: Geological, Theological, and Educational Perspectives, Edited by Robert W. Hanson.
The creation/evolution controversy is examined by scientists, theologians, educators, and historians. These authors view the controversy as a false dichotomy and as an attempt to force a choice between two ideas that are not mutually exclusive. Includes case studies from several states. 1986; 240 pp.; hardcover $24.95 ($19.95 for AAAS members); AAAS Publication #86-19.

Are students in the U.S. developing the skills necessary for a high technology society, or will it be technological boom, educational gloom? Useem examines education in California's "Silicon Valley" and Boston's Route 128, two of the country's leading high tech centers, and suggests ways for education and industry to forge a stronger partnership for the future. 1986; 278 pp.; hardcover $19.95 ($15.95 for AAAS members); AAAS Publication #86-21.

The Gene-Splicing Wars: Reflections on the Recombinant DNA Controversy, Edited by Raymond A. Zilinskas and Burke K. Zimmerman.
Questions of safety and ethics about recombinant DNA techniques continue to surface. This book takes a look at historical, political, industrial, scientific, and international aspects of these issues. The authors show how lessons learned from the experience can be used to cope with similar issues in the future. 1986; 288 pp.; hardcover $24.95 ($19.95 for AAAS members); AAAS Publication #86-18.

Who controls research? A growing number of legal and administrative disputes raise critical issues of professional sovereignty, scientific secrecy, and proprietary rights. Nelkin offers cases illustrating the dilemmas that arise as the interests of scientists, the rights of citizens, and the security needs of government and industry come into increasing conflict. 1984; 130 pp.; softcover $9.00 ($7.25 for AAAS members); AAAS Publication #84-17.

Order from: AAAS Marketing, Dept. SP, 1333 H Street, NW, Washington, DC 20005. Please specify the appropriate AAAS Publication #(s), add $2.00 postage & handling per order, and allow 4-6 weeks for delivery. VISA and MasterCard accepted. For shipments to CA, add applicable sales tax.

©Eastman Kodak Company, 1989
The same advanced Kodak emulsions that are redefining photographic art are now poised to do the same for scientific photography.

New KODAK T-MAX 100 Professional Plates and KODAK Technical Pan Plates offer scientific photographers the same characteristics as the black-and-white films chosen by world-renowned fine-art photographers. Plus the ultimate in dimensional stability.

T-MAX Plates have very fine grain, high resolution, and conventional panchromatic sensitivity. Technical Pan Plates have extremely fine grain, extremely high resolution, and extended-red panchromatic sensitivity.

Between them, these plates comprise the widest available range of contrasts and applications. The T-MAX Plate excels in the low-to-medium-contrast range and the Tech Pan Plate, moderate to high contrast.

These new products complement the world's most comprehensive and widely available line of glass plates. They are stocked in all popular sizes and can be ordered in non-stocked sizes and thicknesses to fit virtually any camera configuration.

If superior quality, consistency, and stability are important to you, you'll want to learn more about the newest KODAK Plates. For details, write the Kodak Information Center, Eastman Kodak Company, 343 State Street, Rochester, NY 14650-0811. Or call toll free, 1 800 242-2424, Ext 12.
GIVE YOUR CLONES SOME DIRECTION.

Introducing λgt11 Sti-Not expression vectors from Promega.

λgt11 Just Got Better

Cloning:
Defined orientation—Eco-Not vector arms
High efficiency—no self-ligation of inserts or arms
Full-length inserts—Not I primer-adaptor

Screening:
Higher chance of expression—for detection of β-gal fusion proteins with antibodies (ProtoBlot® immunoscreening system)
Visualization of recombinants—blue/clear screening
Versatility—use antibody or nucleic acid probes

Purification:
Fast, simple method—using ProtoSorb® lacZ immunoaffinity adsorbents
