

	7	This Week in <i>Science</i>
Editorial	9	Retrieval of Scientific and Technical Data
Perspective	13	Molecular Defects in Insulin Action: C. R. KAHN AND B. J. GOLDSTEIN
Letters	14	Fairness in Employment Testing: J. HARTIGAN AND A. WIGDOR; C. HOLDEN; L. HUMPHREYS ■ Baseball and Quantum Theory: N. BUCKLEY ■ Educational Computing: A. LUEHRMANN
Policy Forum	16	The Third Generation of the Space Age: G. A. KEYWORTH II AND BRUCE ABELL
News & Comment	20	Science Advisers Need Advice ■ Ethics by the Book
	23	NIH Grapples with Conflict of Interest
	24	Representative Roe Rides to the Rescue
	25	House Approves SSC Construction Europe Says No to Animal Patents
Research News	26	Chaos Theory: How Big an Advance? ■ Art Imitates Chaos ■ Everywhere You Look, Everything Is Chaotic
	29	Brown Dwarf Candidates Abound
	30	Do Sperm Spread the AIDS Virus?
	31	<i>Random Samples</i> : What Are You Worth? ■ Counting Heads ■ Cold Fusion Couture
Articles	32	Number of Siblings and Educational Attainment: J. BLAKE
	37	Explosive Molecular Ionic Crystals: W. L. FAUST
Reports	43	Smectic Liquid Crystal Monolayers on Graphite Observed by Scanning Tunneling Microscopy: D. P. E. SMITH, H. HÖRBER, C. GERBER, G. BINNIG
	45	Scaling Body Support in Mammals: Limb Posture and Muscle Mechanics: A. A. BIEWENER
	48	Scale Invariance in Food Web Properties: G. SUGIHARA, K. SCHOENLY, A. TROMBLA

- **SCIENCE** is published weekly on Friday, except the last week in December, and with an extra issue in February by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with **The Scientific Monthly**® Copyright © 1989 by the American Association for the Advancement of Science. The title **SCIENCE** is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$75. Domestic institutional subscription (51 issues): \$120. Foreign postage extra: Canada \$46, other (surface mail) \$46, air mail via Amsterdam \$85. First class, airmail, school-year, and student rates on request. **Single copy sales**: Current issue, \$3.50; back issues, \$5.00; Biotechnology issue, \$6.00 (for postage and handling, add per copy \$0.50 U.S., \$1.00 all foreign); Guide to Biotechnology Products and Instruments, \$18 (for postage and handling add per copy \$1.00 U.S., \$1.50 Canada, \$2.00 other foreign). Bulk rates on request. **Authorization to photocopy** material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 27 Congress Street, Salem, Massachusetts 01970. The identification code for *Science* is 0036-8075/83 \$1 + .10. **Change of address**: allow 6 weeks, giving old and new addresses and 11-digit account number. **Postmaster**: Send Form 3579 to *Science*, P.O. Box 1722, Riverton, NJ 08077. *Science* is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.
- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Molecules of 10-alkylcyanobiphenyl condensed onto the surface of graphite are imaged with the scanning tunneling microscope (STM). The image is seen over an enlargement. The 56 by 56 Å² image has a height range of 1 Å, where red is highest and blue is lowest. The STM is sensitive to the different functional groups of the molecule; the biphenyl groups appear in the image as red ovals and the alkyl groups as green tails. See page 43. American Association for the Advancement of Science

Science serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

Publisher: Richard S. Nicholson

Editor: Daniel E. Koshland, Jr.

News Editor: Ellis Rubinstein

Managing Editor: Patricia A. Morgan

Deputy Editors: Philip H. Abelson (*Engineering and Applied Sciences*); John I. Brauman (*Physical Sciences*)

EDITORIAL STAFF

Senior Editor: Eleanor Butz

Associate Editors: Keith W. Brocklehurst, Martha Coleman, R. Brooks Hanson, Barbara Jasny, Katrina L. Keiner, Edith Meyers, Linda J. Miller, Phillip D. Szurromi, David F. Voss

Letters Editor: Christine Gilbert

Book Reviews: Katherine Livingston, *editor*; Susan Milius

This Week in Science: Ruth Levy Guyer

Contributing Editor: Lawrence I. Grossman

Chief Production Editor: Ellen E. Murphy

Editing Department: Lois Schmitt, *head*; Mary McDaniel,

Patricia L. Moe, Barbara P. Ordway

Copy Desk: Joi S. Granger, Jane Hurd, MaryBeth Shartle,

Beverly Shields

Production Manager: James Landry

Art Director: Yolanda M. Rook

Graphics and Production: Holly Bishop, Julie Cherry, Catherine S. Siskos

Covers Editor: Grayce Finger

Systems Analyst: William Carter

NEWS STAFF

Correspondent-at-Large: Barbara J. Culliton

Deputy News Editors: Roger Lewin, Colin Norman

News and Comment/Research News: Gregory Byrne, Mark

Information for contributors appears on page XI of the 31 March 1989 issue. Editorial correspondence, including requests for permission to reprint and reprint orders, should be sent to 1333 H Street, NW, Washington, DC 20005. Telephone: 202-326-6500. **Advertising correspondence** should be sent to Tenth Floor, 1515 Broadway, New York, NY 10036. Telephone 212-730-1050 or WU Telex 968082 SCHERAGO, or FAX 212-382-3725.

Retrieval of Scientific and Technical Data

At one time it was possible for an individual to become knowledgeable about new developments impinging on his or her field by simply scanning a few publications. But with the continuing proliferation of new journals and of interdisciplinary work, this is no longer feasible. Electronic equipment is creating an enormous flood of data. At the same time, computers and electronics are providing means of storing and retrieving new and old information so that in many instances an individual can tap information even more effectively than did predecessors a generation ago. Procedures for making information more readily available to the user are evolving.

Starting in the early 1970s, a few bibliographic databases became accessible on-line. Since that time, the number of publicly accessible databases has increased to about 4200 and their character has changed. Full text is available in some instances. Numerical databases have come to constitute a substantial fraction of the total. A majority of the bases are devoted to legal or business matters, but about 30% are related to medicine, science, or engineering.

The National Library of Medicine draws on the world's medical literature and that of related fields to create 20 important databases, including Medline. The Chemical Abstract Service of the American Chemical Society has joined with associates in Germany and Japan in a network (STN) that provides 85 databases. Their resources include 8 million chemical abstracts dating back to 1965 and information concerning the properties of 9.5 million substances. The consortium is expanding its coverage of biology, physics, mathematics, engineering, and materials science.

Although a few organizations are the dominant creators or vendors of databases, as many as 1700 different entities maintain at least one base. This individual initiative, coupled with the procedures of vendors, has led to a wide variety of systems, services, command languages, protocols, and terminologies—in short, a kind of electronic chaos that limits the value of the vast store of information for the average user. The situation demands more and helpful front-end software to ease access. It also requires agreed-on standards.

The costs of on-line searches average about \$120 per hour and range from about \$26 to several hundred dollars per hour. Such costs do not seem to discourage business or the legal profession. However, universities find it necessary to limit the use of on-line vendors. Instead, they are tending to buy or lease diskettes or compact disc read-only memory databases (CD-ROMs) that can then be tapped by the campus computer network. Some campuses are being equipped with high-speed glass fiber networks, and professors and students have their own personal computers.

The CD-ROM is already having an increasing role in data storage and retrieval. A disc only 12 centimeters in diameter can contain the equivalent of 200,000 pages of book text. For databases that do not change rapidly or at all, the disc is an ideal repository. Currently the commercially available CD-ROMs are priced at about \$6000 each. This covers the cost of creating the master from which the discs are produced as well as a profit. Once the master is paid for, the cost of producing additional CD-ROMs is only a few dollars per copy. The cost of a CD-ROM reader is only a few hundred dollars. When demand for the discs becomes substantial, their price will fall. Already competition has become evident. There are now nine producers of CD-ROMs containing the information available on Medline. Price ranges from about \$1000 to \$1500. Special beneficiaries of cheaper CD-ROMs would be physicians, scientists, and engineers in Third World countries. They would need some simple equipment, but the cost of the information provided would be a tiny fraction of what it has been. Already CD-ROMs containing vast amounts of geophysical data are being supplied for a few dollars.

In the United States, computer networks are playing an increasing role in the research and education communities. More than 600 networks with over 100,000 computers and workstations are currently linked by INTERNET. NSFNET, one of the key components of INTERNET, links 250 institutions and major laboratories. Its traffic has been increasing rapidly. During April 1989 it carried 800 million packets. A larger, faster, federally sponsored network is being advocated. This would facilitate enhanced exchange of complex numerical data and transmission of figures and images.—PHILIP H. ABELSON
