The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.
COVER  Polar view of the sun constructed from Kitt Peak magnetograms, showing magnetic flux drifting from the sunspot belt to the negative-polarity north pole during 1983. The poleward streams, which form a rigidly rotating spiral pattern, gradually establish a strong "topknot" polar field as the 1986 sunspot minimum approaches. See page 712.
