This Week in Science

Editorial
901 A National Engineering and Technology Agency: W. F. BRINKMAN

Letters

News & Comment
906 Biotechnology on the Auction Block
908 NIH Goes “Extra Mile” on Gallo
909 U.S. Lags on Birth Control Development
910 The Puzzling Pulsar That Wasn’t There
911 Scientists Battle Over Grand Canyon Pollution
912 MIT Picks Biologist as President

Research News
913 Mathematics Untwists the Double Helix ■ All Wound Up in DNA
916 Impact—Geomagnetic Reversal LinkRejected
917 Hurricane Forecasting Shows Promise

Articles
920 Learning Curves in Manufacturing: L. ARGOTE and D. EPPLE
925 Studies of Unusual Simple Molecules by Neutralization-Reionization Mass Spectrometry: F. W. MCLAFFERTY
930 Protein Sorting to Mitochondria: Evolutionary Conservations of Folding and Assembly: F.-U. HARTL and W. NEUERT

Reports
946 The MerR Metalloregulatory Protein Binds Mercuric Ion as a Tricoordinate, Metal-Bridged Dimer: J. D. HELMBANN, B. T. BALLARD, C. T. WALSH
949 Predator-Induced Life-History Shifts in a Freshwater Snail: T. A. CROWL and A. P. COVICH
Dark-field photomicrograph of the anterior hypothalamus of a hamster immunostained with antibodies to vasopressin, showing the paired suprachiasmatic nuclei (SCN) between the third ventricle and optic chiasma (top) and the magnocellular vasopressin cells (yellow fireworks) of the paraventricular nucleus, above which is the SCN. The SCN, the locus of the mammalian biological clock, can be identified as two oval structures at the base of the brain (toward title). See page 975. [Photographic image by Russell Foster]
