1206 The Rotation Period of Saturn's Polar Hexagon: D. A. Godfrey
Platelet–endothelial cell adhesion molecule–1 (PECAM-1) immuno-localized to the intercellular borders of human endothelial cells with the peroxidase–anti-peroxidase method. Molecular cloning revealed that PECAM-1 belongs to the cell adhesion molecule subfamily of the immunoglobulin gene superfamily. PECAM-1 is related to or identical to the CD31 antigen present on human platelets and some myeloid cells and may participate in surface recognition events. See page 1219.
